for the **Champion** in you!

# Ready to do the SAMBA?

For years Samba rubbers have ranked among the most popular rubbers on the table tennis market. They impress with longevity, excellent spin, outstanding feeling and not forgetting the distinctive sound of both classics.

The successful story of the two Sambas motivated us to further expand the Samba series to bring it to the top technical level in order to meet the requirements of today's playing style.

## The result: SAMBA TECH, SAMBA 19, SAMBA 27

### SAMBA TECH

The new SAMBA TECH is, like its preceding model SAMBA PLUS, a high-end development „Made in Germany“.

The very large-pored 37,5° sponge of the SAMBA TECH differs significantly from its predecessor. In addition the pimple configuration of the upper rubber was radically improved. The pimples are wider, therefore spaces are smaller. This results in direct ball response and increased propulsion for offensive strokes. The traditional distinctive Samba sound was also inbuilt and even intensified.

The upper rubber of the new JOOLA Samba is at the highest level of technical expertise. The revised, micro-fine surface structure provides increased dwell time allowing shots to be played with the finest of angles without the ball slipping off. The arc remains aggressive and playing enjoyment is unlimited.

### SAMBA 19 und SAMBA 27

With the new SAMBA 19 and SAMBA 27 the Japanese focus of the classic Samba is continued. Rubbers „Made in Japan“ have historically represented longevity, the highest spin and an inimitable playing feeling. For decades the unique features of the Samba rubbers have fascinated numerous players.

Every player knows from their own personal experience, that it is hard to play a counter spin stroke with heavy incoming spin. The result is a lot of mistakes - balls fly uncontrollably over the table, out of play or even into the net. This is quite different with the new Samba 19 and Samba 27 generation. Mistakes in hopeless playing situations are reduced to a minimum and confidence in your game is strengthened.

The sponge of the original Samba was replaced by a fine-pored version and used as the basis for production of the new Samba. The coloured sponges (SAMBA 27: red 48°, SAMBA 19: blue 41°) are technically superb, ensuring an ideal dose of power transmission to the dynamic upper rubber, thus offering the best possible control and precision.

# Test of Samba rubbers

The different results of our rubber test regarding trajectory, spin and speed are not considered to be an assessment. They are only an approach to illustrate the small and subtle differences. Playing systems are individual; therefore every player needs a different rubber with different playing

features. Players acting in half distance tend to prefer soft, grippy rubbers with higher trajectory. Players that rather play hard stroke spins at the table tend to harder and faster materials.

SAMBA

SAMBA PLUS

SAMBA 19

SAMBA 27

SAMBA TECH

Comparing trajectories of all Samba rubbers reveal that the new SAMBA 19 has the highest trajectory, due to the soft sponge and grip of the new upper rubber.

In relation the trajectory of the SAMBA 27 is much flatter, the flight time of the ball shorter and therefore speed is higher.

Regarding trajectory features the new SAMBA TECH is exactly in between the SAMBA 19 and SAMBA 27.

Speed measurement illustrates that the SAMBA 19 with the flattest trajectory is also ahead regarding speed. Number two after SAMBA TECH.

In respect of spin SAMBA TECH is number one, followed by SAMBA 27 and SAMBA 19. The extraordinary good spin values of the new Samba rubbers are definitely due to the new upper rubber, causing enhanced contact of the ball with the upper rubber.

**JOOLA®**

## SAMBA TECH

Pimples in. 1.8, 2.0, max. mm.

Latest rubber technology paired with a distinctive sound:

Experience the Samba feeling at it's purest with the JOOLA SAMBA TECH.

This rubber is a great overall package. The soft, large pored 37.5° sponge ensures a prolonged ball contact and produces an excellent ball feedback. Great control values can be reached in passive, as well as in active game situations. At the same time, it has been possible to generate extra power for offensive play due to the newly devised rubber surface.

An ideal mixture for all players who lay value on controlled offensive play.

The JOOLA SAMBA TECH offers pure playing enthusiasm with cutting edge technology!

Art. 70055

Strategy	ALL OFF-OFF
Speed	fast
Spin	extra high
Control	extra high
Hardness	37,5°

This develops significantly more grip of the ball for more spin due to an intense friction surface structure.

Innovative macropore sponge design that increases the catapult effect therefore enabling higher ball trajectories.

# The Samba asks for a dance!

## The new top rubbers from Japan

Both the JOOLA classic SAMBA, as well as the SAMBA PLUS with it's built-in speed glue effect are rightly listed in the JOOLA success story and cannot be done without in the rubber world.

Modified versions on a top technical level, which will attract many players, can now be presented with the SAMBA 19 and SAMBA 27.

**NEW**

### SAMBA 19

Pimples in. 1.8, 2.0, max. mm.

The 41 degree version of the newest Samba development offers an extremely balanced relationship of feedback with a soft sponge and acceleration in the active game. The very good to control own-catapult makes the JOOLA SAMBA 19 to a rubber, that not only forgives inaccuracies when carrying out a shot, but also corrects them.

Blue sponge, latest Japanese rubber technology with special factory tuning methods and a very good value for money are the trademarks of the new Samba version.

Art. 70400

Speed	fast/extreme
Spin	extra high
Control	high/extra high
Hardness	41°

**NEW**

### SAMBA 27

Pimples in. 1.8, 2.0, max. mm.

The JOOLA SAMBA 27, which can easily be recognised by it's red sponge, has been brought on to the market specifically developed for players who want to use the advantages of hard rubbers. The 48 degree version was able to positively convince particularly athletic topspin players, who were thrilled by the direct and exact power transmission from the rubber on the ball. The consequence: spin and speed can be precisely dosed and controlled – the placement accuracy is impressive!

Art. 70410

Strategy	OFF OFF OFF ex.
Speed	extreme
Spin	extra high
Control	medium/high
Hardness	48°

## SAMBA

Pimples in. 1.8, 2.0, max. mm.

Nothing sounds better! The most popular JOOLA rubber, due not only to its fantastic sound when speed glued but also because of its longevity, excellent spin and optimal feeling. For years players around the world have appreciated the combination of non-skidding upper rubber and the soft, super-elastic caoutchouc underlay. And for many players the SAMBA is still the ultimate because of its spin features.

Art. 70031

Control	high				
Hardness	38°				

## SAMBA PLUS

Pimples in. 1.8, 2.0, max. mm.

Finally the big brother of the most played JOOLA rubber in recent decades is available. JOOLA classic now with incorporated speed gluing effect, that brings back the legendary Samba Sound into table tennis halls. The new SAMBA PLUS outshines all previous sound machines. Development and testing by a team of rubber developers, led by table tennis legend Jörg Roskopf, has been a lengthy process but the new SAMBA PLUS is now ready for the market. The result is an optimum composition of feeling, speed and rotation with phenomenal sound and effect. The SAMBA PLUS sets new standards in development of soft rubbers with incorporated speed glue effect.

Art. 70040

### SAMBA PLUS offers:

- Original pure speed gluing feeling
  - Long durability
  - Playing feeling in every situation
  - Super sound
  - Spin and rotation at the table and from half distance
- ... just a real JOOLA SAMBA!

# The JOOLA RHYZM brings rhythm to the game!

JOOLA RHYZM rubbers were introduced in 2012. The first series comprised of 3 versions (RHYZM, RHYZM 425 and RHYZM 375). RHYZM-P followed later, a special version for use with the new plastic ball, and now we introduce RHYZM TECH with the latest technology.

From the beginning JOOLA RHYZM rubbers were among the most popular rubbers on the table tennis market. The development work on this top selling rubber was significantly influenced by Jörg Rosskopf, two-time Olympic medal winner and current national coach of the German Men's National Team. On the one hand the target was to meet the exacting requirements of quality and playing standards of top players and, on the other hand, to design rubbers that offer optimal and, above all, controlled performance for players of all levels.

This was achieved by application of 3 innovative technologies:  
Geo-Force, Geo-Sponge and Geo-Grip.

Geo-Force Technology – the pimples beneath the rubber are more widely spaced resulting in new standards of dynamism for offensive play and control in passive play.

The macro pore sponge design of the dynamic sponge gives the ball an extraordinary impulse and an unforgettably enjoyable playing experience.

The outstanding spin of the Rhyzm rubbers and the typical arching shots are the result of the extra grippy surface (Geo-Grip Power Technology).

JOOLA player Aruna Quadri, who impressed at the world cup in Düsseldorf beating several top players and was only defeated by World Champion Zhang Jike after a great fight in the quarter finals, wholeheartedly relies on “RHYZM-P”. Within the shortest time the „Male Table Tennis Star 2014“ has fought his way up into the world's top 30 and has convinced the table tennis world with his skills and great fighting spirit. Quadri's style is individual to him. His speed at the table and exceptional stroke technique are inimitable. However these outstanding achievements are only possible when the perfect material matches the player. “JOOLA RHYZM is by far the best rubber for me - elasticity and grippy rubber surface ideally support my play close to the table”, stated the darling of the public and African Champion from Nigeria. That's the biggest compliment we could have from such a special professional player.

**JOOLA®**

# Test of the RHYZM family

The different results of our rubber test regarding trajectory, spin and speed are not considered to be an assessment. They are only an approach to illustrate the small and subtle differences. Playing systems are customized; therefore every player needs a different rubber with different

playing features. Players acting in half distance tend to prefer soft, grippy rubbers with higher arcs. Players that rather play hard stroke spins at the table tend to harder and faster materials.

RHYZM

RHYZM 375

RHYZM 425

RHYZM-P

RHYZM-TECH

Here again, it becomes apparent that the softest rubber is also the one with the highest trajectory: JOOLA RHYZM 375 is clearly in first position before RHYZM-TECH and RHYZM 425, followed by RHYZM-P and RHYZM with harder sponge.

In respect of speed JOOLA RHYZM with the hardest sponge is ahead, followed by the spin machines, JOOLA RHYZM-P and JOOLA RHYZM-TECH. RHYZM 375 and RHYZM 425 are rated as the controlled versions of the series.

RHYZM TECH, followed by RHYZM-P, are two rubbers reaching the highest values, due to their surface structure maximally supporting spin generation. Followed by RHYZM, RHYZM 425 and RHYZM 375.

# Rise to the challenge!

## RHYZM-TECH

Pimples in. 1.8, 2.0, max. mm.

Another chapter in the success story of the popular Rhyzm rubber is written by the JOOLA RHYZM-TECH.

Due to modifications of the sponge, which has again been designed with considerably larger pores, a real catapult machine has been developed. The JOOLA RHYZM-TECH is a rubber that supports any rotation input in all situations and therefore gives all active topspin players an extra boost.

The JOOLA RHYZM-TECH is a challenge to overcome. Once this is managed, you can reach a new, significantly higher level.

Art. 70370

Strategy	ALL   OFF-   OFF   OFF ex.
Speed	fast/extreme

Austria

## RHYZM

Pimples in. 2.0, max. mm.

Especially developed for the topspin player who plays an aggressive offensive game with extreme power, dynamics and rotation. The new, extremely grippy and spin elastic upper rubber combined with the 48° sponge provides rotation and piercing force as never before. Despite the sensational power, JOOLA RHYZM offers extreme control in passive play, whether in a short touch game over the table, chopping or offensive topspin game. At all times JOOLA RHYZM provides a new dimension of playing fun.

The JOOLA RHYZM brings rhythm to the game.

Art. 70279

Strategy	OFF-   OFF   OFF ex.
Speed	extreme

## RHYZM 375

Pimples in. 2.0, max. mm.

The advanced and grippy Rhyzm surface combined with the soft large-pored sponge, provide a special “groove” at the table. It is an absolute top rubber for those players who can't do without the feeling and the sound of a soft sponge, and who prefer a rubber with a high ball flight when applying topspin to the ball. The ball contact time, extended by the soft sponge, provides precise ball response and highest control values in all playing situations. Especially when blocking, in counter duels or in return of service, the enhanced ball control is noticeable.

Art. 70287

Strategy	DEF ex.   ALL   OFF-   OFF
Speed	fast
Spin	extra high
Control	extra high
Hardness	37,5°

## RHYZM 425

Pimples in. 2.0, max. mm.

The JOOLA RHYZM 425 is the ideal compromise for all players that expect a best possible ball response, but at the same time cannot do without the power of an extremely hard sponge, as preferred by table tennis professionals. The speed and hardness of the JOOLA Rhyzm 425 can be classified between the JOOLA Rhyzm and the rather softer Rhyzm 375. The advanced Rhyzm surface guarantees full dynamics, extreme spin and fun when applying different spins. The Rhyzm 425 unfolds its full potential especially in topspin rallies. With this rubber you experience the exceptional “Rhyzm feeling”. Choose the Rhyzm 425 and experience fun in playing like never before!

### RHYZM-P

Pimples in. 1.8, 2.0, max. mm.

RHYZM – on the market for 4 years and already almost a classic!

The focus fell on development and improvement of the sponge up until now, whereas here a much improved rubber surface has been precisely worked upon. This has led to the rubber having substantially more grip, with which not only more spin can be generated, but also better control and the durability is improved. Ideal also for use with the new Poly-ball.

# MAXXXIMUM SUCCESS

JOOLA MAXXX® –  
the rubber with the Triple X:

MaXXXimum Power

MaXXXimum Spin

MaXXXimum Control

## MAXXX® 400

Pimples in. 1.8, 2.0, max. mm.

The rubber with the softest sponge of the MAXXX series (40°). Recommended for aggressive allrounders who lay emphasis on control but don't want to do without the necessary power in performance.

Art. 70320

Strategy	ALL OFF OFF
Speed	fast/extreme
Spin	extra high
Control	high/extra high
Hardness	40°

## MAXXX® 450

Pimples in. 1.8, 2.0, max. mm.

The dynamic 45° Medium Geo Sponge in combination with the new upper rubber surface provides the optimum mixxx of power, spin and ball response. Ideal for spin-oriented attackers, also playing from half distance, who lay emphasis on ball feeling.

Art. 70326

Strategy	OFF OFF OFF ex.
Speed	extreme
Spin	extra high
Control	high
Hardness	45°

## MAXXX® 500

Pimples in. 2.0, max. mm.

The fastest and most dynamic rubber of the MAXXX series. The rubber is hard due to the 50° sponge, which is being used for the first time worldwide. However, the new dynamic macropore comb combination (Geo Sponge Technology) and the new pimple geometry (Geo-Force Technology) provide extreme sensitive feeling and good spin. Ideal for players with a busy training schedule who prefer harder rubbers and have been on the lookout for the 3 X-factors of a rubber.

# Classics Made in Germany!

## X-PLODE

Pimples in. 1.8, 2.0, max. mm.

Since the banning of speed glue, the X-PLODE with incorporated speed glue effect caused a sensation among players, who were seeking an alternative for the speed provided by speed gluing. The spin elastic, very grippy upper rubber in combination with the medium hard, large-pored sponge characterise the X-PLODE. The unprecedented catapult effect and the sensational spin provide "x-plusive" strokes with unrivalled rotation.

Art. 70161

Strategy	ALL   OFF-   OFF   OFF ex.
Speed	extreme
Spin	extra high
Control	medium
Hardness	47,5°

## X-PLODE SENSITIVE

Pimples in. 1.8, 2.0, max. mm.

The softer version of the X-PLODE!

The sensitive-touch effect conveys ball feeling of a special kind. While the first ball contact is extremely sensitive and therefore controlled, the rubber shows its full power at the ball take-off: the ball catapults like an "ex-plo-sion" off the rubber.

The latest JOOLA Green Power technology in the X-PLODE SENSITIVE provides a unique, incorporated speed glue effect!

Art. 70061

## ENERGY

Pimples in. 1.8, 2.0, max. mm.

Speed glue effect is incorporated to a new dimension: ENERGY in „GREEN POWER“ technology. With ENERGY GREEN POWER almost 100% of the possible increase in performance achieved by fresh gluing is permanently built in. Specially suited to players that prefer spin attack but demand control and precision.

ENERGY GREEN POWER – the new era has begun.

Art. 70080

Strategy	ALL   OFF-   OFF
Speed	fast/extreme
Spin	extra high
Control	high
Hardness	42,5°

## ENERGY 325

Pimples in. 1.8, 2.0, max. mm.

The ENERGY family has been expanded with an extremely soft version. The highly elastic upper rubber in combination with the 32.5° sponge boosts the ball contact time and causes a higher ball trajectory. Safe block balls, also against extreme topspin shots, are another feature of the new ENERGY 325.

Players that want to be successful with a lot of control and safe topspins cannot avoid using the ENERGY 325!

Art. 70191

Strategy	DEF ex.   ALL   OFF-   OFF
Speed	medium/fast
Spin	extra high
Control	extra high
Hardness	32,5°

## ENERGY X-TRA

Pimples in. 1.8, 2.0, max. mm.

The ENERGY X-TRA is the next-stage development of the ENERGY, the alternative to speed gluing. The 37.5° soft sponge with the inclusive speed glue effect provides for even more spin and speed. It is especially suited to players who put emphasis on control in their strokes without giving up the advantages of speed gluing.

Green Power – incorporated speed glue effect.

## MAMBO

Pimples in. 1.8, 2.0, max. mm.

JOOLA MAMBO is manufactured in Japan using a revolutionary technology: The proportion of chemical packing material in the sponge and in the upper rubber are increased to the maximum permitted levels. This technique has a positive influence on the feeling of the ball and the sound without losing flexibility and speed. The result is a super-flexible and perfect rubber.

Art. 70201

Strategy	ALL   OFF-   OFF   OFF ex.
Speed	fast
Spin	extra high
Control	high
Hardness	40°

## MAMBO H

Pimples in. 1.8, 2.0 max. mm.

JOOLA MAMBO H is a high technology High Friction rubber. The sponge is slightly harder than that of conventional Mambo. With a special gluing technique the upper rubber, which is already designed for extreme tension, is then combined with the sponge. This results in an unbelievable natural energy. This, in combination with the extreme grippy upper rubber surface, makes it a rubber with a lot of spin.

Art. 70219

Strategy	ALL   OFF-   OFF   OFF ex.
Speed	fast/extreme

Control	medium
Hardness	42,5°

## ZACK

Pimples in. 1.9, max. mm.

With the rubber ZACK, JOOLA introduces a classic rubber made in Germany onto the market, designed specifically for all players who wish to do without an extreme catapult effect and extreme speed. Therefore it is a high-quality, all-round rubber, characterized by good control, placement accuracy and rotation tolerance. Outstanding durability and an extremely good value for money make the JOOLA ZACK a rubber that enthusiasts of classic rubbers, produced with the most modern German technology, cannot afford to miss.

Art. 70070

Speed	low			
Spin	low			
Control	extra high			
Hardness	40°			

## TONI HOLD ANTI TOPSPIN

Pimples in. Anti-Spin. 1.5, 2.5 mm.

The original anti spin rubber - unrivalled for total control. The best answer to topspin and strong spin.

Art. 71005

Strategy	DEF	DEF	DEF ex.	ALL
Speed	low			
Spin	medium/high			
Control	high			
Hardness	40°			

## SHARK

Long pimples. OX, 0.5, 1.0 mm.

JOOLA SHARK is a long pimples rubber with disturbing effect, which has an extremely high number of pimples. A good disturbing rubber, it has 3 components, the highest possible length of pimples, the highest possible number of pimples and the thin diameter of pimples. This has been achieved almost perfectly with SHARK.

Art. 71170 red

Strategy	DEF	DEF	DEF ex.	ALL
Speed	low			
Spin	medium			
Control	extra high			
Hardness	40°			

## ORCA

Long pimples. OX, 0.5 (black), 1.0 (red) mm.

The ORCA can be controlled slightly easier than the SHARK. The number of long pimples is reduced and the pimples are thicker. Therefore blocks and attacking shots are easier to play. ORCA is particularly suitable for the aggressive disturbing game at the table.

Art. 71180

Strategy	DEF- DEF DEF ex. ALL
Speed	low/medium
Spin	medium
Control	extra high

## BADMAN RELOADED

Long pimples. OX, 1.3 mm.

For many players the BADMAN was the best and most dangerous “untreated” long pimple rubber. After the ban of the “treated” long pimple rubbers JOOLA has remade the BADMAN with the latest Tensor technology.

Our defensive experts Chen Weixing and Latin American Champion Liu Song think that the reloaded version of the BADMAN is once again the best defensive long pimple rubber presently available on the market. With BADMAN RELOADED it is possible to play extreme chop shots with dangerous wobble effect - relive the experience of treated long pimples!

Art. 71250

Strategy	DEF- DEF DEF ex.
Speed	low
Spin	medium
Control	extra high
Hardness	50°

## OCTOPUS

Long pimples. OX, 0.5, 1.1-1.2 mm.

Two of the world’s best defensive players, Chen Weixing and Latin American Champion Liu Song rely on the long pimples rubber OCTOPUS. With OCTOPUS you can play extreme chop shots and also add variation by taking the ball early at the table. An extra hard sponge provides extremely awkward effects.

# Rubber Technologies

**Green Power**  
Performance achieved from fresh gluing is permanently incorporated into the rubber.

**Geo-Force Power**  
Newly designed pimple arrangement with a more hollow space between the single pimples provides maximum spin and best possible control.

**Geo-Grip Power**  
This develops significantly more grip of the ball for more spin due to an intense friction surface structure.

**Tensor**  
Incorporated inner tension in the sponge and upper rubber. More elasticity, more spin, more speed and more feeling.

**Geo-Sponge Power**  
Innovative macropore sponge design that increases the catapult effect therefore enabling higher ball trajectories.

## TABLE TENNIS RUBBERS DIFFER AS FOLLOWS:

JOOLA has made the decision to cease using the old numerical system of rubber rating. We believe that our new classification system is easier to understand and that an exact classification into very precise ratings is impossible and highly subjective.

We will keep the traditional categories of playing features, but classification now has only 4 levels:

### PIMPLES IN

THE „standard“ rubber. Combination of upper rubber (pimples pointing inward) and sponge, available in thicknesses of 1.0 – 2.3mm.

### SHORT PIMPLES/PIMPLES OUT

Rubber with pimples upper rubber (pimples pointing outward). Short pimples are especially used for blocking and counter play.

### LONG PIMPLES

Available without sponge (ox) or with different sponge thicknesses. Long pimples are for blocking/disturbing game at the table as well as chopping from half distance.

### ANTI-SPIN

Combination from plain upper rubber and sponge. The plain surface facilitates returning of balls with a lot of rotation (service, spin).

## THE TRADITIONAL PLAYING FEATURE CATEGORIES:

We will keep the traditional categories of playing features, but classification now has only 4 levels indicated by different colours:

**Low Medium Fast Extreme**

### SPEED

Defines speed of the ball when catapulted from the player's racket. The higher the speed of the blade the higher the ball bounce. For beginners we recommend rackets with with less speed.

### SPIN

Defines rotation produces by hitting the ball. The higher the grip of a rubber the more rotation can be given to the ball by touching.

### CONTROL

The control value is always proportional to the speed value. In practice rackets with high speed are harder to control than rackets with low speed. In order to sufficiently control with high speed a good deal of practice is necessary.

### HARDNESS

In addition the rubbers are classified according to the hardness of the sponge (degree). The harder the rubber the more speed. The softer the rubber the more sensitive and controlled.

### Speed

- low
- medium
- fast
- extreme

### Spin/Control

- low
- medium
- high
- extra high

## Playing strategies

In order to choose the most suitable equipment every player should decide into which playing strategy they fall.

DEF-	DEF	DEF extreme	ALL	OFF-	DEF	OFF extreme
Classic, pure defensive play behind the table with occasional attacking shots.	Modern defensive play, also at the table, with positioned offensive shots.	Modern defensive play using special rubbers (e.g. Badman), aimed at disturbing the opponent's offensive play.	All techniques/stroke variations are played. Controlled shots, various rotation shots and positioned shots are more important than speed. One stroke side (usually backhand) is focused on blocking or counter play.	Various topspin techniques, often from half distance are paramount. Offensive play with precise attacking shots and variation of topspin. Often shots with later hitting of the ball and higher ball trajectory are played.	Dominant topspin strokes from both sides. Topspin is not only the preparing but also the point-making stroke.	Offensive players with uncompromising risk tolerance. Speed oriented stroke and power spin are paramount. Speed is prior to spin and variations.

# JOOLA blades – quality, performance, innovation

However, JOOLA blades are even more than that - for years they have been the epitome of table tennis pleasure and the guarantee of success at the highest playing levels. Jörg Rosskopf, table tennis legend and current national coach of the German men's national team sums it up as follows:

“JOOLA blades have been the milestone of my career - these achievements would not have been possible without the meticulous work of the development department.” This appreciation of the equipment is surely only one of many reasons for our longstanding close cooperation with “Rossi”.

## high-quality

Each JOOLA blade is developed according to precise specifications. There is a clear objective: no matter how high standards are, we aim higher, with specially selected materials, attractive designs and excellent workmanship.

## professional

The combination of the experience of our top players and the expertise of our table tennis specialists in the field of blade design and manufacture produces powerful and innovative results. Our contract players and their knowledge are the key to success in the development of our blades. Who else could determine the small but subtle differences better than a pro who works with these materials on a daily basis. In order to guarantee perfect quality, all of our blades are tested to the limit before being included in our range.

## control

In order to guarantee the highest standards, the individual components of the new JOOLA AIR blades are pre-selected according to strict quality control. It is not for nothing that JOOLA AIR blades are said to be the lightest blades in the world. At the end of production each blade is weighed, inspected and signed off.

## individual

The range is always focused on the requirements of the customer. Table tennis players are individual and their feelings differ. Therefore the blade is designed to be a perfect match to their playing characteristics, form and design. Our goal is to develop an appropriate blade for every playing system, every age, all budgets and every playing strength. We use different materials for the production of our range of blades which gives great diversity of choice. We also offer a range specially for children, with blade and grip size adjusted for small hands.

## fair

We produce high-quality blades to the highest technical level and at fair prices. Long-lasting experience in manufacture, an extensive supplier network and optimal production processes enable us to offer excellent blades at excellent prices.

### Gluing

In order to reach optimum gluing quality, glue and technique (hot or cold) are adapted to the used materials and required playing features.

### Top veneers

Exclusively high quality veneers are selected for each blade according to highest quality standards.

### Handles

All JOOLA blades are equipped with ergonomic handle, precision milled with CNC machines, optimally adapted to the hand for perfect playing feel.

### Core

In order to achieve several playing features we use various materials that are tested for suitability from development to series production.

**NEW**

BLADE SERIES

## JOOLA AIR

JOOLA presents two first class blades classed into the lowest weight category. Due to a special drying process and a prolonged storage period of the wooden veneers, the moisture in the wood has been extracted to a very high degree. The result is two extremely light blades with excellent playing characteristics. The player needs less power to hold the racket, which can then be invested in concentrating on controlled movements when playing a shot.

A special and costly selection process during each production step guarantees that the given weight values are strictly followed and are guaranteed by JOOLA.

**JOOLA Air will liven up the game!**

# Winning is so easy!

## AIR FIBRE

approx. 59-60 g., 5+2 Acosica, Samba, Glassfibre, Balsa

JOOLA presents a top class blade with the JOOLA AIR FIBRE. The single wooden veneers are selected very carefully according to the highest quality standards.

This enables the guaranteed feather-weight of 59-60g. The 4mm thick Balsa core, which is encased on both sides by high quality fiber glass, produces „pure ball feeling“ with excellent control values. It is an experience to play with this blade! The JOOLA AIR FIBRE is probably the only blade worldwide, which is guaranteed to weigh a maximum of 60 grams!

## AIR CARBON

approx. 71-72 g., 5+2 Limba, Fineline grey, Carbon Net, Balsa

The JOOLA AIR CARBON is the offensive version of this series. The JOOLA AIR fundamental character is maintained, due to the 5mm thick Balsa core: unique playing feeling and controllability. This version is also an absolute lightweight with a guaranteed 71-72g. The player profits from the saved power and can invest it in his/her game. Due to the two Carbon layers, the JOOLA AIR CARBON gains also in speed and precision for the offensive game!

# TPE

## Top Player Edition

## TPE FEELING

approx. 90 g., 5 Hinoki, Ayous, Kiri

High value OFF blade with an exclusive „burned“ Hinoki top layer. The noble Hinoki which is heated up using a special technique, ensures a high stiffness and consistent, balanced playing features on the whole face of the blade. The employed Ayous and Koto veneers make the blade very controllable without losing much speed.

Art. 61425 flared  
Art. 61427 straight

Strategy	ALL   OFF   OFF
Speed	fast
Control	high

## TPE NATURE

approx. 85-90 g., 7 Limba, Ayous, Ayous, Ayous

A true rarity are very light, natural Limba veneers, which do not only ensure the JOOLA NATURE a noble appearance, but also an exceptional feeling. This experience is supported by a seven layer build-up of Ayous veneers. Offensive topspin balls, hard smashes or well-placed block balls, the JOOLA Nature is aggressive but still tame. A playing feeling which every player dreams of.

Strategy	OFF-   OFF   OFF ex.
Speed	fast
Control	medium/high

## TPE PERFORM

approx. 85-90 g., 5+2 Hinoki, Koto, Carbon, Ayous

A progressed development of the JOOLA classic „Roskopf-Emotion“. The selected Hinoki top layer is specially heated – due to this the blade is even more resistant against bending and guarantees high control even when carrying out the fastest shots. The built-in Carbon fibers not only enlarge the Sweetspot, but also help produce a higher, more spin-orientated ball flight.

Strategy	OFF-   OFF   OFF ex.
Speed	fast
Control	high

## TPE FIGHT

approx. 90-95 g., 5+2 Hinoki, Koto, Kevlar, Ayous

A special type of Aramid fiber blade. On top of the high value Kevlar Carbon texture (Kevlar owns the largest specific tear resistance related to the weight), only particularly high value and selected materials are used in the production of the JOOLA FIGHT. The extremely quick blade also allows topspin balls to be played with feeling and a lot of spin. Surprising and point winning speed changes are possible, especially when playing long spin rallies.

## BLADE SERIES JOOLA TPE

JOOLA presents excellent competition blades for ambitious players, who require that something special with the Top-Player-Edition (TPE) series. All blades have been developed by working together with our top contracted players and coaches, such as the German table tennis legend Jörg Roßkopf, the world class defensive player Chen Weixing or European champion Petriša Solja. Compromises in the veneer selection or in the production of the TPE blades have not been made. Even the packaging is exceptional and of high value. The blades stand out due to their noble and elegant simplicity.

Every blade is delivered in the highest quality.

# ROSSKOPF

## ROSSKOPF EMOTION

approx. 85-90 g., 5+2 Hinoki, Koto, Carbon, Ayous

The carbon fibre core of the blade creates an enhanced sweet spot which results in excellent control. In comparison with other blades with carbon core, the ROSSKOPF EMOTION impresses with a relatively soft feel and a high trajectory, due to the specially selected Hinoki surface. The blade offers the best possible balance between feeling in passive and speed in active play.

**BLADE SERIES**  
**JOOLA ARUNA**

Play with the blade of the ITTF star 2014, Aruna Quadri!

The experiences with the new plastic ball and the individual needs of the 2014 ITTF star have been applied in the development of the new Aruna blade series, which after intensive tests, are now an innovated highlight in the JOOLA blade segment.

- THE BLADES OF THE JOOLA TOP STAR
- OPTIMAL BALL FEEDBACK
- HIGH CONTROLLABILITY AND GOOD BALL FEELING
- CARBON TECHNOLOGY FOR MAXIMUM SPEED

*Aruna Quadri*  
*Male Table Tennis Star 2014*

## ARUNA OFF

approx. 85-90 g., 5+2 Hinoki, Koto, Carbon, Ayous

Aruna Off is the current blade of the JOOLA top star, which he already used at his sensational performance at the World Cup 2014 in Düsseldorf. The only thing that has been modified is the design.

Ideal feedback for a good ball feeling and high controllability are the major features. Despite this, the 7-ply blade still increases rotation at topspin in an ideal way. The Aruna Off also has the necessary power for maximum speed due to its modern carbon technology.

Art. 61400 flared  
Art. 61401 straight

# SPIRIT

**MCS**

MCS - MULTIPLE COMPOUND SYSTEM

The **blade series SPIRIT** is made using the Multiple-Compound-System (MCS). The core of the blade consists of several veneers, which are first glued horizontally and then sliced up vertically. On top of this, are two traditionally glued layers. This ensures a high bending strength and an exceptional control over the blade. The thicker (stronger) the horizontally glued veneers are, the faster the blade becomes. The MCS-System enables quick blades with high control.

## SPIRIT ALL+

approx. 80 g., 4+1 Fineline blue, Koto, X (Balsa/Ayous)

The employed veneers of Balsa and blue Ayous for the 4,5mm strong core make the SPIRIT ALL+ an excellent to control all-round blade of the slightly more offensive type with great feeling. The approximately 80g heavy blade lies well in the hand and guarantees fun when playing.

Art. 61305 flared  
Art. 61307 straight

Strategy	ALL   OFF-
Speed	medium
Control	high/extra high

## SPIRIT OFF

approx. 85 g., 4+1 Fineline red, Ayous, X (Balsa/Ayous)

The core layer of the SPIRIT OFF is 6mm thick. The thicker Balsa veneer in connection with the red Ayous layers make the blade much faster and less elastic. This guarantees controlled counter and topspin balls at high speed.

Art. 61310 flared  
Art. 61312 straight

Strategy	OFF   OFF
Speed	fast

# K-series

## RAG-Technology

Unique Round-About-Grip-Technology – exclusively only in JOOLA blades. The handle completely incorporates the blade. One Hundred percent precision is guaranteed through manufacturing with a CNC milling machine. By all around gluing of the grip plates with the blade, vibrations are eliminated – therefore a more intensive ball response and increased control for the player.

→ BLADE INTEGRATED INTO THE HANDLE

### K5

approx. 85 g., 5 Samba, Limba

The JOOLA K5 does not only fall into the category of first class high-tech blades due to its exclusive design! In practice, vibration control is achieved through the RAG technology and the JOOLA "honeycomb", which is almost legendary amongst experts. With these features the K5 has become an established bestseller.

Art. 66530 flared  
Art. 66531 anatomic

### K6

approx. 90 g., 5+2 Samba, Limba, blue Texalium, Samba

The K6 with the Round About Grip technology is a blade of the highest quality. The K6 is an offensive blade without compromise – the middle layer made of Blue-Texalium guarantees excellent stiffness which means that it is almost distortion-free and the size of the sweet spot remains consistent. Speed and control of the K6 offer perfect playing balance and the RAG grip guarantees excellent ball feedback.

JOOLA K6 – a modern and extremely ambitious high-tech blade that guarantees all requirements of a competition blade, especially for top players.

### K7

ca. 90 g., 5+2 Koto, Red Samba, Carbon NetT, Samba

The Carbon-NetT-Material was used for the first time in the JOOLA K7. Carbon-NetT is lighter than other carbon fabrics and still provides the wanted stiffness that is responsible for the speed of the blade. The Enzo layers used at bonding provide high control, which can't be taken for granted on carbon blades. The RAG handle, exclusively developed by JOOLA, additionally increases this control.

# WING

The JOOLA blade innovation with Wing-Shaft-Integration Technology

## WING MEDIUM

approx. 80 g., 5 Koto, Ayous, Kiri

WSI technology (Wing Shaft Integration) provides a totally new feel. The handle is integrated into the blade like a wing thus providing excellent stability. The layers of precious Hinoki are aerodynamically shaped into the handle so that the grip fits perfectly in the hand.

The combination of veneers provides well-balanced playing features and is ideal for players with a lot of spin and a precise blocking game.

## EAGLE MEDIUM

approx. 75-80 g., 5 Samba blue, Sapele, Kiri

High control, good speed, very low weight and a fabulous price are the secrets of the EAGLE MEDIUM.

The blade that allows ambitious table tennis players the fun of playing table tennis has its origin in a well-engineered and proven production technology. Because of the well-balanced speed and control, the EAGLE MEDIUM is also suitable as a beginner blade for children and youth training.

## EAGLE CARBON EXTREME

approx. 85 g., 3+2 Fineline, Carbon, Kiri

The EAGLE CARBON EXTREME offers sheer carbon fun. Its subtle, anthracite coloured design signals the drop-dead carbon philosophy of the blade.

The hard, carbon-reinforced core is veneered with Kiri wood and provide it's complete controlled power. The sweetspot, enlarged by carbon, guarantees the best possible ball feeling for the player. The noble design is eye catching.

## COLT OFF CONTROL

approx. 85 g., 5 Limba, Black Limba, Samba

Very balanced offensive blade with excellent control in serve and receive situations and when playing passively. At the same time, it offers enough power to dominate the opponent when playing actively.

Art. 66558 flared

Strategy	ALL   OFF-
Speed	fast
Control	high/extra high

**Chen Weixing**  
Austria

## CHEN DEFENDER

approx. 90 g., 7 Samba yellow, Samba, Enzo, Samba

For some time, the Chen Weixing Defensive blade has been one of the most popular defensive blades. Working with the world class defensive player from Austria, we have developed another blade designed for extreme defensive players.

The CHEN DEFENDER is an oversize blade with considerably more control. The Enzo glue layer between two Samba veneers provides greater control and tremendous feel of the ball.

Art. 64335 straight

Strategy	DEF- DEF DEF ex.
Speed	low
Control	extra high

## CHEN WEIXING

approx. 90 g., 5+2 Limba, Koto, Black-Cloth, Kiri

Designed by Europe's best defensive player, it is best suited to a variable and controlled chop defensive game. However, fast topspin shots, as played by Chen Weixing, are also possible without any problem.

The layers of black-cloth in the construction provide increased control.

Art. 64330 flared  
Art. 64325 straight

Strategy	DEF- DEF DEF ex. ALL

## TPE FEELING XS

approx. 80 g., 5 Hinoki, Ayous, Kiri  
The JOOLA TPE Feeling has exactly the same construction. The XS-version has a smaller face and thinner handle. Ideal for ambitious children.

Art. 61428 flared

Strategy	ALL   OFF-   OFF
Speed	fast
Control	high

## WING MEDIUM JUNIOR

approx. 80 g., 5 Koto, Ayous, Kiri  
The classic JOOLA blade Wing Medium is now also in a special child and youth version available. It is the first time that the JOOLA WSI technology is being employed in a junior blade. In this procedure, the handle is drawn into the face of the blade in the shape of a wing, giving the blade an improved stability. The built-in elements, which are made of high quality Hinoki, are sanded down in the handle so that they are extremely round. This develops an amazing feeling of the handle, especially for small hands.

As with the rubbers, JOOLA has made the decision to cease using the old numerical system of rubber rating. We believe that our new classification system is easier to understand and that an exact classification into very precise ratings is impossible and highly subjective.

The blade design will incorporate the following characteristic which also makes JOOLA blades very distinctive:

#### Colour coding of speed

In our view, the decisive factor for classification of a blade is speed. Therefore we will base all playing categories on the speed of the blade. The speed features are classified into different colours.

## Handles

## Playing strategies

#### DEF-

Classic defensive orientated game away from the table with an occasional attacking shot.

#### DEF

Modern defensive game, also close to the table, with placed attacking balls.

#### DEF extreme

Modern „material“ game with special rubbers (e.g. Badman), with the aim to disrupt the opponent's attacking game.

#### ALL

All techniques/shots are played. Controlled shots, variation of spins and placement are more important than speed. One side, usually the backhand side, is focused on blocking or counter shots.

#### OFF-

Variable topspin techniques, often away from the table, are in focus. The balls are mostly played with a later contact point and have a higher ball flight.

#### OFF

Game-determining topspin shots from both sides dominate the game. The topspin is not only the set-up, but also the point-winning shot

#### OFF extreme

Offensive player who plays with a lot of risk. Speed-orientated and power-topspins stand out from other shots. Speed is more important than spin and variation.

## Blade Technologies

**MCS – Multiple Compound System**  
The veneers are block glued, and afterwards cut across and glued again.

**RAG**  
Round-About-Grip is a handle developed by JOOLA which integrates the complete blade into the handle.

**Flow glue**  
Glue used in aeroplane construction provides an extremely hard, almost vibration free blade.

**Junior blade**  
Blades especially designed for a child's hand, with smaller blade and shorter handle.

**CARBON**  
The classic among the used fibres. Increased the sweet spot, reduced vibration.

**FIBRE**  
Specially refined VV fibre for highest stability and enlarged sweet spot.

**CARBON CS**  
Extra catapult effect for speed and spin.

**meliorate CARBON**  
Very hard and expensive carbon material. Large sweet spot, unrivalled control.

**WSI (Wing-Shaft-Integration Technology)**  
The JOOLA blade innovation with Wing-Shaft-Integration Technology Wing-shaped handle reinforcement.

**BURNtec**  
Almost warp-free blade with moisture removed.

**Balsa**  
Soft power with extra feeling at lowest weight!

**Texalium**  
Aluminium coated fiberglass fabric, large sweet spot, good acceleration.

# New Balls Please!

The start of the plastic era

In March 2012 the ITTF announced that celluloid balls would be replaced with new plastic balls at international tournaments from 1st July 2014.

Initially plastic balls were used at world-class level and then gradually introduced at club level.

## The reason

for the rule change was the fact that the raw material is limited and highly flammable which resulted in celluloid balls being classified as dangerous goods. This categorization means there are strict rules regarding import and considerable difficulties in supplying different countries – therefore a rule change was necessary.

The introduction of the plastic ball involved a series of production problems, and of course, like any change of regulations, lots of discussions among players. However those discussions can't be compared to the arguments over the introduction of the 40mm ball some years ago. In the meantime players at the highest level have got used to the new material and in the fullness of time club players will also adapt as there is almost no difference to the celluloid ball in terms of quality, performance and durability.

Two types of plastic balls are available, either with or without seams. As the names suggest, those with seams have 2 halves stuck together and the seamless version where the balls are, so to speak, inflated.

JOOLA is one of the few companies offering both types of ball. SUPER-P, with seam, was the first plastic ball with ITTF approval and the seamless FLASH was introduced this year, also with ITTF approval. FLASH is now used as the official playing ball by the three times Champions League winners ttc berlin eastside and the German Federal League club TTC Grünwettersbach and also by many regional associations and national associations in the Czech Republic, Hungary and Turkey.

Art. 42200

# Functionality combined with top design

Our aim is to produce high-quality clothes for players at an affordable price. Comfort and great fit with modern design in diverse colour combinations have been a feature of JOOLA textiles for decades.

The selection of material for our clothing range also leaves nothing to be desired. Besides the various textiles made from differently finished polyester fabrics there are also shirts made from ever popular cotton. All products are subject to strict quality controls and are made for us by top manufacturers.

Years ago it was our brand that introduced a special ladies collection for table tennis. After a very short time our “Lady Collection” became a great success. Meanwhile the annual introduction of few unique pieces of women’s clothing has been extended and now offers a complete range including tracksuits, shirts and the increasingly popular skorts.

JOOLA star and long-time partner Georgina Pota is enthusiastic about the new textile collection.

“The excellent fit and design make me feel good and therefore help my sporting success”, Georgina stated. The attractive player from ttc berlin eastside, current Ladies’ Champions League champion, regularly provides advice and support on colour selection and comfort. The likeable Hungarian, who again and again captivates by tough counter and attacking play, sees a change within the table tennis sector with regard to fashion: “Previously the players clothing was often not properly thought through - today more emphasis is placed on colour coordination from head to toe.”

According to Georgina JOOLA offers the best combination of an ideal fashionable look with harmonious colours and design.

# JOOLA ATOLL

## OPTIMUM STABILITY FOR YOUR FEET

### ATOLL

Specially designed for the requirements of elite table tennis, the high quality made JOOLA ATOLL is the ideal shoe for players with the highest demands.

The breathable mesh fabric, as well as the extra soft, ergonomic inner sole provide a comfortable fit. The specifically for table tennis requirements developed MD/rubber sole convinces with good grip and enables an excellent sense of balance. The JOOLA ATOLL offers the best credentials for that, what good footwork in table tennis distinguishes: a stable stance and quick changes in direction!

Größen: 36 - 46

# JOOLA B-SWIFT

## NO COMPROMISES

### B-SWIFT

An absolute highlight among table tennis shoes. The modern and yet functional design is specifically tailored to the demands of top performance table tennis.

The newly designed sole with incorporated, extremely soft speed absorbing components, perfectly transform even the fastest changes in movement and therefore help to implement the sensed playing situation to footwork.

The JOOLA top players Chen Weixing and Daniel Habesohn (European Champions doubles 2012) use this shoe.

# JOOLA TOUCH

A NEW LOOK

## TOUCH

The classic among table tennis shoes, Touch has been upgraded with a new appealing design. The sole, manufactured in the same way for many years, provides exceptional grip. The upper material has now been revised and the seams and design have been improved. Therefore, TOUCH is still the model for all leisure and club players.

Sizes: 36 - 46

Art. 98141 white

## RALLY

The top shoe from JOOLA for players of the highest standard. The uppers are made from breathable mesh and functional micro fibre which guarantees excellent breathability and comfort. In the sole the proven phylon material is used, making it very light and slip-resistant. The legendary EVA inner sole in combination with the new supination support prevents the foot from deviating outwards. The RALLY has been developed for the ambitious player demanding an extremely lightweight, non-slip and flexible table tennis shoe that also reduces heavy strain on the joints.

Sizes: 35 - 47

Art. 98230 blue

## PRO JUNIOR

FOR KIDS ONLY

For the first time, JOOLA introduces a shoe specially designed for children. The Pro Junior has a non-slip sole that has been established for years. The EVA mid-sole protects children's joints from too much strain during the growth period. The extremely light shoe enables sudden direction changes and supports the natural movements in table tennis.

Sizes: 30 - 36

# Epitome of a perfect table tennis table

## The story of the JOOLA brand started, ...

when in 1952 a few enthusiastic table tennis players came to the sports department of the former store JOOss in LAndau and asked, whether a good table tennis table was available. There were almost no table tennis table manufacturers back then in Germany, in most cases a local carpenter manufactured something. So the idea came up, to build an own table in the ski workshop. After the first table was delivered and approved the news spread pretty fast, first in Rhineland Palatinate, then throughout Germany, that at JOOss in LAndau table tennis tables had been available. The demand increased in such a way that after a short period of time an industrial production was established and an own business was set up - JOOLA.

Table of 1956

**Model TOURNAMENT**  
274x152.5cm, two-part.  
19mm plate  
105,- DM

Until today the original JOOLA competition tables are manufactured near Landau, in the small vine village Siebeldingen. The production of the legendary table top is still unique. It is varnished in a special process - no other manufacturer uses this elaborate system. The composition of the paint as well as the drying process with high temperatures, are absolute company secret and just about kept locked up as the Coca Cola formula. Result is the special about the JOOLA table - the fabulous ball bounce. In contrast to other tables, where the ball always “slips” more or less, the JOOLA table top impresses with a proper ball bounce. The ball bounces considerably higher as on other tables. This makes JOOLA tables probably the most popular tables worldwide for almost all world class players.

JOOLA had been three times equipment supplier of the Olympic Games, as often as no other manufacturer. For the first time tables were provided for the Olympic Games in Atlanta.

In the course of the games JOOLA managing director Michael Bachtler and back then ITTF president, Adham Shahara, had

the idea to design the table more up-market and more TV compatible. This idea also turned into reality, the first show court table was presented at the Olympic Games in Sydney in 2000. It had an undercarriage casing made of red cloth, optically adapting to the hall floor, thus connoting a floating table top - up to today the goal of many show court version. Later JOOLA developed a show court easy to set up and to dismantle - a wooden “skirt”, for individual design and usage in clubs just about every week in clubs, associations or at tournaments.

JOOLA tables with their unique surfaces „Made in Germany“, have lost none of their fascination and are still considered the epitome of perfect table tennis tables!

The list of events that have been equipped with JOOLA tables since the first try more than 60 years ago is endless - Olympic Games, Paralympics, World Championships, Asian Games, World Cup, European Championships, Asian Championships, the first European Games, countless World Tour tournaments and national championships around the world, and most recently the European Championships 2016 in Budapest. And JOOLA is particularly proud that all these top events are played on the same tables that all clubs can afford for their halls.

# 5000 – the superlative JOOLA table!

The JOOLA 5000 starts a new chapter in the 50-year-old story of success of JOOLA table tennis table production. For the first time in history, the legendary JOOLA table top is available with a thickness of 25 mm. This guarantees a 100% even bounce of the ball on any part of the playing area – no sliding, naturally a quick and high ball bounce as on all JOOLA competition tables.

In addition the JOOLA 5000 impresses with a new, convenient and ultra-modern undercarriage.

Even national coach Jörg Roßkopf was overwhelmed by the clean bounce of the ball when testing the JOOLA 5000 for the first time: "I played my first strokes at the age of 8 on a JOOLA table and I have won almost all major titles on JOOLA tables, but this new table with the 25 mm top exceeds anything. The ball bounces cleanly but is still quick. Sliding of the ball is almost impossible on this table. In my opinion this is the perfect table tennis table, unique worldwide!"

## 5000

- original JOOLA competition table top, 25 mm
- extremely fast playing surface due to special processed polyester coating
- metal frame 60 mm
- automatic system
- stable, powder-coated metal undercarriage
- height adjuster
- stable construction with automatic legs
- large 150 mm wheels for easy transport
- double anti-tilting device
- corresponds with Norm EN 14468-1 A high performance sports

## SHOWCOURT 2014

- original JOOLA competition table top, 22 mm
- playing surface with specially processed polyester coating
- extreme even ball bounce
- stable metal undercarriage encased in a sturdy plastic surround
- height adjuster for alignment on uneven floors
- corresponds with European Standards EN 14468-1 A top performance sport

Art. 11450

The undercarriage encasing can be individually designed.  
Price on request.

# Classic perfectly designed!

Table from Atlanta 1996

## OLYMP

- original 22 mm JOOLA competition table top
- extremely fast playing surface due to special processed polyester coating
- metal frame 50 mm
- automatic stand-combi system (wheels can be lifted when playing, locking the table in place and leaving it standing on 8 legs)
- stable, powder-coated metal undercarriage
- corresponds with EN 14468-1 A

Art. 11342 green

Art. 11343 blue

# Quality at the highest level!

## ROLLMAT

- original 22 mm JOOLA competition table top
- extremely fast playing surface due to special processed polyester coating
- metal frame 50 mm
- transport system – four wheels on each half
- stable, powder-coated metal undercarriage
- double anti-tilting device
- low storage space
- ideal for clubs with heavy usage
- corresponds with EN 14468-1 A

Art. 11340 green

Art. 11341 blue

## DUOMAT

- original 22 mm JOOLA competition table top
- extremely fast playing surface due to special processed polyester coating
- metal frame 50 mm
- transport system – four wheels on each half
- stable, powder-coated metal undercarriage
- double anti-tilting device
- low storage space
- ideal for clubs with high usage
- corresponds with EN 14468-1 A

Art. 11319 green

Art. 11420 blue

## 2000-S

- original 22 mm JOOLA competition table top
- extremely fast playing surface due to special processed polyester coating
- metal frame 50 mm
- classic trestle table design
- stable, powder-coated metal undercarriage
- proven, stable construction
- easy installation due to perfect folding mounting
- each half with 2 stable wheels for comfortable transport
- corresponds with EN 14468-1 A

Art. 11324 green

Art. 11400 blue

## WORLD CUP

- original 22 mm JOOLA competition table top
- extremely fast playing surface due to special processed polyester coating
- metal frame 50 mm
- transport system – four wheels on each half
- stable, powder-coated metal undercarriage
- double anti-tilting device
- low storage space
- ideal for clubs with heavy usage
- corresponds with EN 14468-1 B

Art. 11280 green

Art. 11281 blue

## TRANSPORT

- 19 mm table top

- favourable priced, weatherproof plastic net and post set in bag
- adjustable net tension
- corresponds with EN 14468-2 C

Art. 31015

# Totally weatherproof!

# Totally stable!

# Totally outdoor!

293 kg

## CITY

- table made of an acrylic resin/silica sand mixture
- playing surface coated with a layer of acrylic resin, thus very even and free of pores, providing proper playing conditions
- absolute weatherproof – proven against frost, heat, UV radiation and temperature fluctuations
- undercarriage made of solid rectangle tube 50/40 mm, hot-dip galvanised, dismantlable
- assembled by two people without any problems, despite a total weight of 293 kg (the heaviest part only weighs 78 kg)
- because of it's very solid construction ideal for public places, schoolyards, camping grounds
- foundations are not necessary, only level ground
- corresponds with EN 14468-1 C

Art. 11700 blue

128 kg

## EXTERNA

- table made of fibre-glass reinforced polyester
- very even surface for perfect playing conditions
- absolute weatherproof – proven against frost, heat, UV radiation and temperature fluctuations
- solid undercarriage made of substantial rectangle tube, hot-dip galvanised
- easy assembly of legs
- due to it's very solid construction, ideal for public areas, school playgrounds, camping sites
- foundations are not necessary, only level ground
- weight 128 kg
- corresponds with EN 14468-1 C

Art. 11805 blue

117 kg

## EXTERNA GB **NEW**

- table made of fibre-glass reinforced polyester
- very even surface for perfect playing conditions, absolute weatherproof – proven against frost, heat, UV radiation and temperature fluctuations
- solid undercarriage made of substantial rectangle tube
- easy assembly of legs
- due to it's very solid construction, ideal for public areas, school playgrounds, camping sites
- foundations are not necessary, only level ground
- corresponds with EN 14468-1 D
- weight 117 kg
- Net and post set not included.

Art. 11801 blue

NEW  
UNDERCARRIAGE  
FOR MORE  
STABILITY

## NET EXTERNA / CITY

- suitable for table EXTERNA and CITY
- very stable full metal construction, weatherproof
- very substantial and difficult to maliciously remove from the table

Art. 31019

# The most sold TT-Roboter in Germany!

## TT-BUDDY V300 **NEW**

The BUDDY V300 is set up and ready to use in seconds. The ball frequency can be adjusted from 20 to 70. Backspin, topspin and oscillation speed are all adjustable.

- fast setup with no tools or extra equipment necessary
- variable frequencies: from 20 balls/min - 70 balls/min
- variable adjustment of backspin and topspin (each with levels 1 to 5)
- built-in oscillator to play from different table positions
- adjustable oscillation speed and ball frequency
- easy & simple controls
- light weight (approx. 1.1 kg)
- easy storage (Dimensions: 48 x 28 x 28 cm)

Art. 21129

## TT-BUDDY V200 **NEW**

The TT-BUDDY V200 is a full-value robot in an innovative and modern design. It plays chop, topspin or heavy topspin balls and holds up to 100 balls. Due to its size and easy operation it is the perfect training buddy, suitable for home and leisure use.

- fast setup with no tools or extra equipment necessary
- variable frequencies: from 12 balls/min - 70 balls/min
- 3 different spins: backspin, topspin, heavy topspin
- easy and simple controls
- with remote control
- light weight (approx. 1.1 kg)
- Easy storage (Dimensions: 48 x 28 x 28 cm)

Art. 21127

## TT-BUDDY V100 **NEW**

The TT-BUDDY V100 is the ideal training partner for beginners. The ball frequency can be easily programmed with the remote control. Emits topspin balls, the ball compartment holds 100 balls. Battery operation (6AA batteries not included).

Art. 21130

## A/C ADAPTER

Suitable for use with all Buddy robot models

Art. 21149

## NET TT-BUDDY

Economically priced, practical ball collection net for the TT-BUDDY. Easy and fast assembly, fits on the table with nets on the sides. The collected balls fall into a container or bucket (not included) through an opening, making it simple to refill the tt buddy ball container.

Art. 21128 black

INCLUDING COLLECTION NET

## ROBOT SHORTY

The multifunctional table robot JOOLA ROBOT SHORTY is very easy to operate. Variable speed, 8 different rotation modes, different trajectories and oscillation provide a variety of training and application. Collecting net, remote control, large ball container and very easy installation and dismounting make the JOOLA ROBOT SHORTY an indispensable device for all training needs. Including collection net.

Art. 21125

## SCORE BOARD

New practical score board for club use. The JOOLA TEAM SCORE BOARD can be used upright or suspended. The score board can be individually fixed by means of practical hook-and-loop fasteners and is therefore ideally suited for any club hall.

Art. 22411

## SURROUND

Neutral:

Art. 22202	green	2,33 m
Art. 22204	green	2,00 m
Art. 22251	blue	2,33 m
Art. 22261	blue	2,00 m

JOOLA:

Art. 22201	green	2,33 m
Art. 22207	green	2,00 m
Art. 22250	blue	2,33 m
Art. 22260	blue	2,00 m

## SURROUND **NEW**

90 cm high sturdy surround. Very robust and compact. Ideal for daily use in clubs. The height and design of the net means that it will catch most shots so that the flow of play is not disturbed.

Art. 22214	green	2,00 m
Art. 22215	blue	2,00 m

## SURROUND TRANSPORTER

Robust 40/40 mm steel tube construction. 4 wheels with brakes. All parts zinc coated. The special position of the hanging bars allows for the surrounds to be hung directly on to the transporter. 4 sets of hangers with a maximum of 14 surrounds on each.

Dimensions:

- Transporter for 2.00 m surrounds: L 2300 mm / W 720 mm / H 1700 mm
- Transporter for 2.33 m surrounds: L 2360 mm / W 720 mm / H 1700 mm

Art. 22105	2,00 m
Art. 22106	2,33 m

Advertising on surrounds – excerpt from the ITTF regulations:  
 • Lettering or symbols on the inside of surrounds shall not include white or orange nor more than two colours and shall be contained within a height of 40 cm;  
 • it is recommended that they be in a slightly darker or slightly lighter shade of the background colour.

## SCORER STANDARD

Practical plastic construction. Space-saving practical design to protect against damage. With additional pockets for "TIME-OUT" and "HOME/GUEST" display. Numbers 0-30.

Art. 22410

## SCORER POINTER

Robust, durable manufacture, easy to handle, simple to set up and take down with an attractive design. JOOLA SCORER POINTER is ideal for club use, as even when intensively used the plastic parts won't pull out. Includes time out cards.

Art. 22404

## SCORER RESULT

Compact plastic scorer with numbers 0-30.

Art. 22402

## UMPIRES TABLE WITH INBUILT TOWEL BOXES

With the top new JOOLA umpires table with 2 inbuilt towel boxes you professionally present your court in club sports. The lightweight umpires table can easily be carried by one person and is set up in a few seconds. Unlike conventional tables made of cardboard the solid quality of the umpires table ensures long-term usability.

Art. 22510 black

## TOWEL BOX

Practical, low-priced and stable towel box. Suitable for multi use.

Art. 22545 black

## BALL COLLECTOR

Handy „Ball-Collector“ with a practical telescopic pole which makes collecting the balls after each training session a lot easier. Foldable upper part, therefore very little storage space required. Collection net opening: 40 cm, Total length: 2 m

Art. 22720

## UMPIRE TABLE

Matching the JOOLA scorer. Elaborate folding construction, no lose parts, with a carrying handle for easy transport. Chosen for many international events and suitable for club use. L 76 cm, H 69 cm, D 34 cm.

Art. 22500 black

## SERVICE PRACTICE NET

The JOOLA catch-net – no more annoying collecting of the balls. Compact to store and easy to use are the essential characteristics of the new JOOLA catch-net. The practical folding mechanism, the good finish, the clever rolling system and the easy handling make the catch-net an essential helper, especially when practising serves or doing bucket-ball.

Art. 21145

# We'd rather play outside!

## LINUS

A plastik racket made to fit the requirements of an outdoor racket. With a high level of control, the special surface structure also allows spin development, so that slightly spinny topspin and push balls are possible. Racket is robust and ergonomically formed.

### LINUS BAT
