JOOLA® NEWS & TRENDS

RHYZER PRO 50

The development of the JOOLA Rhyzer series, from now on with 50° sponge and modified rubber structure.

STRIPES

Shirt with absolute style factor. Excellently processed and an optimised fit for maximum freedom of movement.

ENERGON SUPER P80-c

Newest technical development in blade-production. Complex, highest quality materials and a totally new playing feel.

GSC 25

Absolute top-of-the-range model with 25 mm upper surface and unique gold-coloured table sub-construction.

PRIME 40 + ***

ABS-premium competition ball with seam, that convinces due to it's optimal durability.

THE RHYZER SERIES

RHYZER 48 / 43

RHYZER 48 / 43

- narrow pimples, larger gaps between pimples
- extremely thin and grippy surface under high tension
- use of large pored 48/43° sponge (pink)
- in the Powermax version with a thicker sponge underlay

RHYZER PRO 50

RHYZER PRO 50

- wider pimples, shorter gaps between pimples
- extremely thin and grippy surface under high tension
- use of mid-sized pored 50° sponge (pink)
- in the Powermax version with a thicker sponge underlay

FLIGHT TRAJECTORY COMPARISON OF RHYZER RUBBERS

ARC - ADVANCED RUBBER CONSTRUCTION CONCEPT

Due to the smaller layer thickness of the upper rubber, the Rhyzer series was able to be fitted with a thicker sponge underlay. This advanced geometry concept gives the JOOLA Rhyzer an extra dynamical upgrade.

standard rubbers

RHYZER series

MADE IN GERMANY

new

	COLOURS		PIMPLES IN

	SPIN EXTRA HIGH		SPEED EXTREME
	STRATEGY OFFENSIVE — OFFENSIVE extreme		

RHYZER PRO 50

The further development of the JOOLA RHYZER series is the ideal rubber for players, who prefer a direct and dynamic playing feel. Just like it's predecessor, it has a very thin and extremely grippy surface, which is under enormous tension. However, the pimple geometry of the RHYZER Pro 50 differs radically. Wider built pimples, that are arranged in smaller distances from each other, in combination with the dynamic, pink coloured 50° sponge with mid-sized pores lead to maximum spin and speed performance. If a high technical basic level exists, the JOOLA RHYZER Pro 50 ignites the turbo!

new

	COLOURS		PIMPLES IN
	SPONGE 2.0/max.+		HARDNESS 48°
	SPIN EXTRA HIGH		SPEED EXTREME
	STRATEGY OFFENSIVE- — OFFENSIVE extreme		

RHYZER 48

RHYZER 48 has a 48° sponge and is on the highest level of development when speaking of speed, catapult and spin. It especially suits modern offensive players exasperating their opponents with fast topspin attacks close to the table and from half-distance. Compared to the RHYZER 43 the topspin trajectory is a little flatter and provides high precision and pressure, especially at offensive actions during the game.

new

	COLOURS		PIMPLES IN
	SPONGE 2.0/max.+		HARDNESS 43°
	SPIN EXTRA HIGH		SPEED FAST/EXTREME
	STRATEGY ALLROUND — OFFENSIVE extreme		

RHYZER 43

RHYZER 43 has a medium hard 43° sponge and excellently suits the spin oriented, multi-variant play close to the table and from half-distance. Despite the enormous speed it compensates shortcomings while hitting the ball. RHYZER 43 provides a rather soft stroke feeling and therefore guarantees very good feedback at an arched trajectory of the ball.

TEST OF THE RHYZM-FAMILY

The different results of our rubber test regarding trajectory, spin and speed are not considered to be an assessment. They are only an approach to illustrate the small and subtle differences. Playing systems are customized; therefore every player needs a different rubber with different playing features. Players acting in half distance tend to prefer soft, grippy rubbers with higher arcs. Players that rather play hard stroke spins at the table tend to harder and faster materials.

RHYZM

SPEED & SPIN COMPARISON

RHYZM-TECH

Another chapter in the success story of the popular Rhyzm rubber is written by the JOOLA RHYZM-TECH.

Due to modifications of the sponge, which has again been designed with considerably larger pores, a real catapult machine has been developed. The JOOLA RHYZM-TECH is a rubber that supports any rotation input in all situations and therefore gives all active topspin players an extra boost. The JOOLA Rhyzm-Tech is a challenge to overcome. Once this is managed, you can reach a new, significantly higher level.

	COLOURS		PIMPLES IN
	SPONGE 1.8/2.0/max.		HARDNESS 42,5°
	SPIN EXTRA HIGH		SPEED FAST
	STRATEGY ALLROUND — OFFENSIVE		

RHYZM-P

RHYZM – on the market for few years and already almost a classic!

The focus fell on development and improvement of the sponge up until now, whereas here a much improved rubber surface has been precisely worked upon. This has led to the rubber having substantially more grip, with which not only more spin can be generated, but also better control and the durability is improved. Ideal also for use with the new Poly-ball.

	COLOURS		PIMPLES IN
	SPONGE 1.8/2.0/max.		HARDNESS 45°
	SPIN EXTRA HIGH		SPEED FAST/EXTREME
	STRATEGY ALLROUND — OFFENSIVE extreme		

RHYZM

Especially developed for the topspin player who plays an aggressive offensive game with extreme power, dynamics and rotation. The new, extremely grippy and spin elastic upper rubber combined with the 48° sponge provides rotation and piercing force as never before. Despite the sensational power, JOOLA RHYZM offers extreme control in passive play, whether in a short touch game over the table, chopping or offensive topspin game. At all times JOOLA RHYZM provides a new dimension of playing fun. The JOOLA RHYZM brings rhythm to the game.

	COLOURS		PIMPLES IN
	SPONGE 2.0/max.		HARDNESS 48°
	SPIN HIGH		SPEED EXTREME
	STRATEGY OFFENSIVE- — OFFENSIVE extreme		

RHYZM 425

The JOOLA RHYZM 425 is the ideal compromise for all players that expect a best possible ball response, but at the same time cannot do without the power of an extremely hard sponge, as preferred by table tennis professionals. The speed and hardness of the JOOLA RHYZM 425 can be classified between the JOOLA RHYZM and the rather softer RHYZM 375. The advanced RHYZM surface guarantees full dynamics, extreme spin and fun when applying different spins. The RHYZM 425 unfolds its full potential especially in topspin rallies. With this rubber you experience the exceptional "RHYZM feeling". Choose the RHYZM 425 and experience fun in playing like never before!

	COLOURS		PIMPLES IN
	SPONGE 2.0/max.		HARDNESS 42,5°
	SPIN HIGH		SPEED FAST
	STRATEGY ALLROUND — OFFENSIVE		

RHYZM 375

The advanced and grippy RHYZM surface combined with the soft large-pored sponge, provide a special "groove" at the table. It is an absolute top rubber for those players who can't do without the feeling and the sound of a soft sponge, and who prefer a rubber with a high ball flight when applying topspin to the ball. The ball contact time, extended by the soft sponge, provides precise ball response and highest control values in all playing situations. Especially when blocking, in counter duels or in return of service, the enhanced ball control is noticeable.

	COLOURS		PIMPLES IN
	SPONGE 2.0/max.		HARDNESS 37,5°
	SPIN HIGH		SPEED MEDIUM/FAST
	STRATEGY ALLROUND — OFFENSIVE

GOLDEN TANGO PS

The basic idea of applying a tacky upper surface to a rubber “made in Germany” and to combine this with a tensor sponge, has also been implemented in the development of the JOOLA GOLDEN TANGO PS. The Sticky Rubber Technology (SRT), that has already been successfully used for the GOLDEN TANGO, increases the spin values of all shots due to the excellent ball connection with the rubber surface. In order to add even higher catapult values to the rubber, the GOLDEN TANGO PS has been given a dynamic, middle-pored 50° sponge. On the one hand, the ball is therefore catapulted more highly away from the rubber, which particularly optimises the performance when playing topspin shots and on the other, the pink coloured sponge provides excellent feedback which gives additional control in difficult playing situations.

	COLOURS		PIMPLES IN
	SPONGE 1.8/2.0/max.		HARDNESS 54°
	SPIN EXTRA HIGH		SPEED FAST
	STRATEGY DEFENSIVE — OFFENSIVE extreme		

GOLDEN TANGO

The JOOLA GOLDEN TANGO is „Made in Germany“, combining the advantages of a tacky upper rubber, usually characteristic of Chinese rubbers, with the enormous elasticity and speed of a Tensor sponge.

This interaction results in a completely new sensation. The tacky surface offers maximum grip thus enabling loaded topspin and undercut strokes at the most extreme blade angles. JOOLA GOLDEN TANGO produces incredible rotation and an arched trajectory. The molecular structure of the energetic sponge underlay makes JOOLA GOLDEN TANGO extremely elastic and provides sufficient speed reserves to counter unexpected spin attacks. The sponge is very forgiving, therefore it also offers maximum control for all cut variations either at the table or from half-distance.

GOLDEN TANGO – MORE ROTATION DUE TO STICKY RUBBER TECHNOLOGY

When the ball hits the rubber surface this is also called „coupling“ in modern table tennis. Coupling is favoured by the sticky surface of the JOOLA GOLDEN TANGO (Sticky Rubber Technology).

Especially at the most extreme topspin strokes slipping of the ball is prevented and the reliable grip of the ball is improved. The result is increased spin effect for all strokes.

Vertically positioned polymer strands at the surface of the Golden Tango (nanoscale) interlock with the surface structure of the ball and provide enlarged adhesive forces (stickiness).

FLIGHT TRAJECTORY COMPARISON

MAXXXIMUM SUXCESS

MAXXX-P

The JOOLA-MAXXX rubbers with the Triple X Factor! MaXXimum power, MaXXimum control and MaXXimum spin are now being completed with a new variation that is even more dangerous.

The new GeoGrip-Power-Technology with the even more intense friction surface is ideal in connection with the special pimple arrangement and the large macropore structure of the sponge for perfect topspin balls at the highest speed. These characteristics come to be an advantage especially when playing with the new Poly-ball.

Due to it being a slightly softer version with a sponge hardness of 42,5°, the MAXXX®-P is ideal for ambitious players, who lay emphasis on control and ball feeling.

	COLOURS		PIMPLES IN
	SPONGE 2.0/max.		HARDNESS 42,5°
	SPIN EXTRA HIGH		SPEED FAST
	STRATEGY OFFENSIVE- — OFFENSIVE extreme		

MAXXX 500

The fastest and most dynamic rubber of the MAXXX series. The rubber is hard due to the 50° sponge, which is being used for the first time worldwide. However, the new dynamic macropore comb combination (Geo-Sponge Technology) and the new pimple geometry (Geo-Force Technology) provide extreme sensitive feeling and good spin. Ideal for players with a busy training schedule who prefer harder rubbers and have been on the lookout for the 3 X-factors of a rubber.

	COLOURS		PIMPLES IN
	SPONGE 2.0/max.		HARDNESS 50°
	SPIN HIGH		SPEED EXTREME
	STRATEGY OFFENSIVE — OFFENSIVE extreme		

MAXXX 450

The dynamic 45° Medium Geo-Sponge in combination with the new upper rubber surface provides the optimum mixxx of power, spin and ball response. Ideal for spin-oriented attackers, also playing from half distance, who lay emphasis on ball feeling.

	COLOURS		PIMPLES IN
	SPONGE 2.0/max.		HARDNESS 45°
	SPIN HIGH		SPEED FAST/EXTREME
	STRATEGY OFFENSIVE- — OFFENSIVE extreme		

MAXXX 400

The rubber with the softest sponge of the MAXXX series (40°). Recommended for aggressive allrounders who lay emphasis on control but don't want to do without the necessary power in performance.

	COLOURS		PIMPLES IN
	SPONGE 2.0/max.		HARDNESS 40°
	SPIN HIGH		SPEED FAST
	STRATEGY ALLROUND — OFFENSIVE		

not only a dance, but a feeling

	SPIN EXTRA HIGH		SPEED MEDIUM/FAST
	STRATEGY ALLROUND — OFFENSIVE		
	MADE IN GERMANY		

SAMBA TECH

Latest rubber technology paired with a distinctive sound: Experience the Samba feeling at it's purest with the JOOLA SAMBA TECH.

This rubber is a great overall package. The soft, large pored 37.5° sponge ensures a prolonged ball contact and produces an excellent ball feedback. Great control values can be reached in passive, as well as in active game situations. At the same time, it has been possible to generate extra power for offensive play due to the newly devised rubber surface. An ideal mixture for all players who lay value on controlled offensive play.

The JOOLA SAMBA TECH offers pure playing enthusiasm with cutting edge technology!

	COLOURS		PIMPLES IN
	SPONGE 1.8/2.0/max.		HARDNESS 48°
	SPIN EXTRA HIGH		SPEED FAST/EXTREME
	STRATEGY OFFENSIVE — OFFENSIVE extreme		
	MADE IN JAPAN		

SAMBA 27

The JOOLA SAMBA 27, which can easily be recognised by it's red sponge, has been brought on to the market specifically developed for players who want to use the advantages of hard rubbers. The 48 degree version was able to positively convince particularly athletic topspin players, who were thrilled by the direct and exact power transmission from the rubber on the ball. The consequence: spin and speed can be precisely dosed and controlled – the placement accuracy is impressive!

	COLOURS		PIMPLES IN
	SPONGE 1.8/2.0/max.		HARDNESS 41°
	SPIN EXTRA HIGH		SPEED FAST
	STRATEGY ALLROUND — OFFENSIVE		
	MADE IN JAPAN		

SAMBA 19

The 41 degree version of the newest SAMBA development offers an extremely balanced relationship of feedback with a soft sponge and acceleration in the active game. The very good to control own-catapult makes the JOOLA SAMBA 19 to a rubber, that not only forgives inaccuracies when carrying out a shot, but also corrects them.

Blue sponge, latest Japanese rubber technology with special factory tuning methods and a very good value for money are the trademarks of the new SAMBA version.

	COLOURS		PIMPLES IN
	SPONGE 1.8/2.0/max.		HARDNESS 35°
	SPIN HIGH		SPEED MEDIUM/FAST
	STRATEGY ALLROUND — OFFENSIVE		
	MADE IN GERMANY		

SAMBA PLUS

Finally the big brother of the most played JOOLA rubber in recent decades is available. JOOLA classic now with incorporated speed gluing effect, that brings back the legendary SAMBA Sound into table tennis halls. The new SAMBA PLUS outshines all previous sound machines. Development and testing by a team of rubber developers, led by table tennis legend Jörg Rosskopf, has been a lengthy process but the new SAMBA PLUS is now ready for the market. The result is an optimum composition of feeling, speed and rotation with phenomenal sound and effect. The SAMBA PLUS sets new standards in development of soft rubbers with incorporated speed glue effect.

	COLOURS		PIMPLES IN
	SPONGE 1.8/2.0/max.		HARDNESS 38°
	SPIN HIGH		SPEED MEDIUM/FAST
	STRATEGY DEFENSIVE — OFFENSIVE		
	MADE IN JAPAN		

SAMBA

Nothing sounds better! The most popular JOOLA rubber, due not only to its fantastic sound when speed glued but also because of its longevity, excellent spin and optimal feeling. For years players around the world have appreciated the combination of non-skidding upper rubber and the soft, super-elastic caoutchouc underlay. And for many players the SAMBA is still the ultimate because of its spin features.

the classics made in Germany

X-PLODE

Since the banning of speed glue, the X-PLODE with incorporated speed glue effect caused a sensation among players, who were seeking an alternative for the speed provided by speed gluing. The spin elastic, very grippy upper rubber in combination with the medium hard, large-pored sponge characterise the X-PLODE. The unprecedented catapult effect and the sensational spin provide "x-plosive" strokes with unrivalled rotation.

	COLOURS		PIMPLES IN
	SPONGE 2.0/max.		HARDNESS 47,5°
	SPIN HIGH		SPEED EXTREME
	STRATEGY OFFENSIVE- — OFFENSIVE extreme		

X-PLODE SENSITIVE

The softer version of the X-PLODE!
The sensitive-touch effect conveys ball feeling of a special kind. While the first ball contact is extremely sensitive and therefore controlled, the rubber shows its full power at the ball take-off: the ball catapults like an „explosion“ off the rubber. The latest JOOLA Green Power technology in the X-PLODE SENSITIVE provides an unique, incorporated speed glue effect!

	COLOURS		PIMPLES IN
	SPONGE 1.8/2.0/max.		HARDNESS 40°
	SPIN HIGH		SPEED MEDIUM/FAST
	STRATEGY ALLROUND — OFFENSIVE		

ENERGY

Speed glue effect is incorporated to a new dimension: ENERGY in „GREEN POWER“ technology. With ENERGY GREEN POWER almost 100% of the possible increase in performance achieved by fresh gluing is permanently built in. Specially suited to players that prefer spin attack but demand control and precision. ENERGY GREEN POWER – the new era has begun.

	COLOURS		PIMPLES IN
	SPONGE 1.8/2.0/max.		HARDNESS 42,5°
	SPIN HIGH		SPEED MEDIUM
	STRATEGY ALLROUND — OFFENSIVE		

ENERGY X-TRA

The ENERGY X-TRA is the next-stage development of the ENERGY, the alternative to speed gluing. The 37,5° soft sponge with the inclusive speed glue effect provides for even more spin and speed. It is especially suited to players who put emphasis on control in their strokes without giving up the advantages of speed gluing.
Green Power – incorporated speed glue effect.

	COLOURS		PIMPLES IN
	SPONGE 1.8/2.0/max.		HARDNESS 37,5°
	SPIN HIGH		SPEED MEDIUM
	STRATEGY DEFENSIVE extreme — OFFENSIVE		

coverings without speed glue effect

	COLOURS		PIMPLES IN
	SPONGE 1.9/max.		HARDNESS 42,5°
	SPIN HIGH		SPEED MEDIUM/FAST
	STRATEGY ALLROUND — OFFENSIVE-		
	MADE IN GERMANY		

ZACK

With the rubber ZACK, JOOLA introduces a classic rubber made in Germany onto the market, designed specifically for all players who wish to do without an extreme catapult effect and extreme speed. Therefore it is a high-quality, all-round rubber, characterized by good control, placement accuracy and rotation tolerance. Outstanding durability and an extremely good value for money make the JOOLA ZACK a rubber that enthusiasts of classic rubbers, produced with the most modern German technology, cannot afford to miss.

	COLOURS		PIMPLES IN
	SPONGE 1.8/2.0/max.		HARDNESS 40°
	SPIN HIGH		SPEED MEDIUM
	STRATEGY ALLROUND — OFFENSIVE extreme		
	MADE IN JAPAN		

MAMBO

JOOLA MAMBO is manufactured in Japan using a revolutionary technology: The proportion of chemical packing material in the sponge and in the upper rubber are increased to the maximum permitted levels. This technique has a positive influence on the feeling of the ball and the sound without losing flexibility and speed. The result is a super-flexible and perfect rubber.

	COLOURS		PIMPLES IN
	SPONGE 1.8/2.0/max.		HARDNESS 42,5°
	SPIN HIGH		SPEED FAST
	STRATEGY ALLROUND — OFFENSIVE extreme		
	MADE IN JAPAN		

MAMBO H

JOOLA MAMBO H is a high technology High Friction rubber. The sponge is slightly harder than that of conventional Mambo. With a special gluing technique the upper rubber, which is already designed for extreme tension, is then combined with the sponge. This results in an unbelievable natural energy. This, in combination with the extreme grippy upper rubber surface, makes it a rubber with a lot of spin.

	COLOURS		PIMPLES IN
	SPONGE 1.2/1.5/1.8/2.0		HARDNESS 38°
	SPIN EXTRA HIGH		SPEED MEDIUM
	STRATEGY DEFENSIVE- — ALLROUND		
	MADE IN JAPAN		

TOPSPIN C

The TOPSPIN C uses the surface of our old Topspin rubber. The secret of this unique rubber lies in the composition of the sponge. This combination of highly grippy upper rubber with a special sponge results in a defensive rubber for perfectly safe defensive play, extreme variations in chop, and superb response to the opponent's topspin.

the material specialists

EXPRESS ULTRA

Speed gluing became popular with short pimple players a long time ago. The time is now right to introduce EXPRESS ULTRA, the pimples out version with incorporated speed glue effect – the short pimple designed for professionals and ambitious offensive players.

	COLOURS		PIMPLES SHORT
	SPONGE 2.0/max.		HARDNESS 35-37°
	SPIN MEDIUM		SPEED FAST
	STRATEGY ALLROUND – OFFENSIVE extreme		
	MADE IN GERMANY		

TANGO ULTRA

A short pimples rubber using the TENSOR effect and the result is not surprising: softer, more control and more spin but also with dramatic effects from the pimples. For passive blocking, TENSOR absorbs the energy but for active blocking and attack the rubber really explodes.

	COLOURS		PIMPLES SHORT
	SPONGE 2.0/max.		HARDNESS 35°
	SPIN MEDIUM		SPEED FAST
	STRATEGY DEFENSIVE extreme – OFFENSIVE		
	MADE IN GERMANY		

TONI HOLD

The original anti spin rubber - unrivalled for total control. The best answer to topspin and strong spin.

	COLOURS		PIMPLES ANTI-SPIN
	SPONGE 1.5/2.5		HARDNESS 40°
	SPIN LOW		SPEED LOW
	STRATEGY DEFENSIVE- – DEFENSIVE extreme		
	MADE IN AUSTRIA		

AMY CLASSIC VERSION

The AMY CLASSIC VERSION has very soft 1.0 mm sponge and is therefore slightly harder to control – however, the spin reversal when blocking is considerably more dangerous. In addition, this rubber also allows attacking and wobble shots.

	COLOURS		PIMPLES ANTI-SPIN
	SPONGE 1.0		HARDNESS 25°
	SPIN LOW		SPEED LOW
	STRATEGY DEFENSIVE – ALLROUND		
	MADE IN CHINA		

AMY CONTROL VERSION

The AMY CONTROL VERSION has a novel, very thin sponge, providing good control. Even hard topspins can be returned without any problem.

	COLOURS		PIMPLES ANTI-SPIN
	SPONGE 0.7		HARDNESS 48°
	SPIN LOW		SPEED LOW
	STRATEGY DEFENSIVE- – ALLROUND		
	MADE IN CHINA		

 COLOURS	 PIMPLES LONG
 SPONGE 0X/0.5/0.9	 HARDNESS 50°
 SPIN EXTRA HIGH	 SPEED LOW/MEDIUM
 STRATEGY DEFENSIVE- — DEFENSIVE extreme	
 MADE IN GERMANY	

CWX

To be a successful defender nowadays it is extremely important to constantly refine all playing components. Cutting defence from half distance is not the only priority any more. Moreover, a defensive player has to be flexible. This requires pimple rubbers that enable such playing characteristics.

Therefore our goal was to develop a long pimple rubber, together with our longterm partner defending ace Chen Weixing, that meets all the requirements of modern defensive play. The result of these efforts is the JOOLA CWX. The pink coloured (50°) sponge with integrated Tensor technology offers enormous opportunities for undercut strokes away from the table, whilst retaining control for disturbing shots close to the table due to the sponge hardness and flat trajectory. The grippy micro structure of the pimple heads and the flexibility of the narrow pimples also allows extreme chop defence with maximum control.

CWX IN CHECK

BADMAN RELOADED

For many players BADMAN was the best and most dangerous "untreated" long pimple rubber. With BADMAN RELOADED it is possible to play extreme chop shots with dangerous wobble effect - relive the experience of treated long pimples!

 COLOURS	 PIMPLES LONG
 SPONGE 0X/1.3	 HARDNESS 45°
 SPIN MEDIUM	 SPEED LOW/MEDIUM
 STRATEGY DEFENSIVE- — ALLROUND	
 MADE IN GERMANY	

SHARK

JOOLA SHARK is a long pimpled rubber with disturbing effect, which has an extremely high number of pimples. A good disturbing rubber, it has 3 components, the highest possible length of pimples, the highest possible number of pimples and the thin diameter of pimples. This has been achieved almost perfectly with SHARK.

 COLOURS	 PIMPLES LONG
 SPONGE 0X/1.0	 HARDNESS 40°
 SPIN MEDIUM/HIGH	 SPEED LOW
 STRATEGY DEFENSIVE- — ALLROUND	
 MADE IN CHINA	

OCTOPUS

Two of the world's best defensive players, Chen Weixing and Latin American Champion Liu Song rely on the long pimples rubber OCTOPUS. With OCTOPUS you can play extreme chop shots and also add variation by taking the ball early at the table. An extra hard sponge provides extremely awkward effects.

 COLOURS	 PIMPLES LONG
 SPONGE 0X/0.5/1.1-1.2	 HARDNESS 50°
 SPIN MEDIUM	 SPEED LOW
 STRATEGY DEFENSIVE- — DEFENSIVE extreme	
 MADE IN JAPAN	

ORCA

The ORCA can be controlled slightly easier than the SHARK. The number of long pimples is reduced and the pimples are thicker. Therefore blocks and attacking shots are easier to play. ORCA is particularly suitable for the aggressive disturbing game at the table.

 COLOURS	 PIMPLES LONG
 SPONGE 0X/0.5/1.0	 HARDNESS 40°
 SPIN MEDIUM	 SPEED LOW
 STRATEGY OFFENSIVE- — OFFENSIVE extreme	
 MADE IN CHINA	

for beginners & more

AXXESS

JOOLA AXXESS is perfectly designed to meet the requirements of ambitious beginners. The soft (37.5°), small porous sponge in combination with narrow pimples give the player excellent ball feedback and allround flexibility. The advantages of the JOOLA AXXESS come into full effect when learning specific stroke techniques or when ball control is of vital importance. The extremely grippy and elastic upper rubber also allows strokes with tremendous spin that will trouble any opponent.

	COLOURS		PIMPLES IN
	SPONGE 1.6-1.8/1.9-2.1		HARDNESS 37,5°
	SPIN HIGH		SPEED MEDIUM
	STRATEGY DEFENSIVE extreme — OFFENSIVE-		
	MADE IN GERMANY		

UPP

New well-priced JOOLA rubber that meets high demands. The medium hard, green sponge combined with the extremely grippy surface provides excellent "speed feeling" and also suits the player that needs full power far away from the table. JOOLA UPP is not for beginners but an alternative for players who request an adequate and top modern competition rubber at an attractive price!

	COLOURS		PIMPLES IN
	SPONGE 1.6/1.9/max.		HARDNESS 35-37°
	SPIN HIGH		SPEED MEDIUM
	STRATEGY DEFENSIVE extreme — OFFENSIVE-		
	MADE IN CHINA		

4 YOU

The logical answer, to offer a low-priced rubber for the player with a low budget. Don't be fooled by the price, this is not a rubber for beginners, but an offensive allround rubber of the best Japanese quality – ideal for the controlled offensive player. The rubbers are ideal in combination with the blades ROSS-KOPF ALLROUND or EAGLE MEDIUM. Amazing value for money.

	COLOURS		PIMPLES IN
	SPONGE 1.5/1.8/2.0		HARDNESS 40°
	SPIN MEDIUM		SPEED MEDIUM
	STRATEGY DEFENSIVE- — OFFENSIVE-		
	MADE IN ESTONIA		

4 ALL

The 4 ALL offers slightly more control than the 4 YOU. The 4 ALL is a classic allround rubber, which is excellent for the developing player. The 4 ALL rubber provides excellent control and is still fast and dynamic, so that all basic strokes can be played without effort.

	COLOURS		PIMPLES IN
	SPONGE 1.5/1.8		HARDNESS 43°
	SPIN LOW		SPEED LOW
	STRATEGY DEFENSIVE- — ALLROUND		
	MADE IN ESTONIA		

TABLE TENNIS RUBBERS DIFFER AS FOLLOWS

JOOLA has made the decision to cease using the old numerical system of rubber rating. We believe that our new classification system is easier to understand and that an exact classification into very precise ratings is impossible and highly subjective.

We will keep the traditional categories of playing features, but classification now has only 4 levels:

PIMPLES IN

THE „standard“ rubber. Combination of upper rubber (pimples pointing inward) and sponge, available in thicknesses of 1.0 – 2.3mm.

SHORT PIMPLES

Rubber with pimples upper rubber (pimples pointing outward). Short pimples are especially used for blocking and counter play.

LONG PIMPLES

Available without sponge (ox) or with different sponge thicknesses. Long pimples are for blocking/disturbing game at the table as well as chopping from half distance.

ANTI-SPIN

Combination from plain upper rubber and sponge. The plain surface facilitates returning of balls with a lot of rotation (service, spin).

SPONGE

Rubbers are available with different sponge thickness from 0x – 2,2. The thicker the sponge the faster the rubber.

THE PLAYING FEATURE CATEGORIES

In General JOOLA differentiate four categories of playing features, each illustrated by an App.

SPEED

(LOW, MEDIUM, FAST, EXTREME)

Defines speed of the ball when catapulted from the player's racket. The higher the speed of the blade the higher the ball bounce. For beginners we recommend rackets with with less speed.

SPIN

(LOW, MEDIUM, HIGH, EXTRA HIGH)

Defines rotation produces by hitting the ball. The higher the grip of a rubber the more rotation can be given to the ball by touching.

HARDNESS

In addition the rubbers are classified accordig to the hardness of the sponge (degree). The harder the rubber the more speed. The softer the rubber the more sensitive and controlled.

RUBBER TECHNOLOGIES

GREEN POWER

Performance achieved from fresh gluing is permanently incorporated into the rubber.

TENSOR

Incorporated inner tension in the sponge and upper rubber. More elasticity, more spin, more speed and more feeling.

GEO-FORCE POWER

Newly designed pimple arrangement with a more hollow space between the single pimples provi-des maximum spin and best possible control.

GEO-SPONGE POWER

Innovative macropore sponge design that increases the catapult effect therefore enabling higher ball trajectories.

GEO-GRIP POWER

This develops significantly more grip of the ball for more spin due to an intense friction surface structure.

SRT (STICKY RUBBER TECHNOLOGY)

The innovative technology gives stickiness to the rubber. Improved adhesive force at the moment of contact provi-des extreme spin, therefore avoiding slipping of the ball.

ARC (ADVANCED RUBBER CONSTRUCTION CONCEPT)

More dynamic due to the use of a thinner upper rubber surface and a thicker sponge underlay.

PLAYING STRATEGY

In order to choose the most suitable equipment every player should decide into which playing strategy they fall.

DEF -

Classic, pure defensive play behind the table with occasional attacking shots.

DEF

Modern defensive play, also at the table, with positioned offensive shots.

DEF extreme

Modern defensive play using special rubbers (e.g. Badman), aimed at disturbing the opponent's offensive play.

ALL

All techniques/stroke variations are played. Controlled shots, various rotation shots and positioned shots are more important than speed. One stroke side (usually backhand) is focused on blocking or counter play.

OFF -

Various topspin techniques, often from half distance are paramount. Offensive play with precise attacking shots and variation of topspin. Often shots with later hitting of the ball and higher ball trajectory are played.

OFF

Dominant topspin strokes from both sides. Topspin is not only the preparing but also the point-making stroke.

OFF EXTREME

Offensive players with uncompromising risk tolerance. Speed oriented stroke and power spin are paramount. Speed is prior to spin and variations.

PBO-c – HIGH TECH FIBRES

for unique playing features

Tear resistant and high elasticity are the outstanding features of the PBO fibre. Poly(p-phenylen-2,6-benzobisoxazol (PBO)) is a synthetic Polymer which is also used in formula 1 cars and aeronautics because of its unique characteristics.

In tests it was established that the interweaving of the PBO fibre bundles with the carbon fibres (in chessboard pattern) provide unique playing features for table tennis blades.

On the one hand the blade gains stability through the combination with the PBO-c fabric, and on the other, the elastic PBO fibre and the slightly harder carbon fibre result in a softer stroke feeling. This ideally suits a spin dynamic but controlled offensive play. The enlarged sweet spot also guarantees an even bounce and therefore reduces the error rate.

Our new blades JOOLA "Nobilis PBO-c" and JOOLA "Zelebros PBO-c" show how the PBO fibre in combination with proven carbon refine a table tennis blade and make it something absolutely unique.

Sweetspot with **PBO-c**

Sweetspot with **Super PBO-c**

SUPER PBO-c

The popular playing characteristics of the PBO-c blades have prompted the JOOLA development team, supported by the know-how of "World Coach 2017" and JOOLA partner Jörg Roskopf, to look for ways of improving the playing characteristics of these valuable blades even more. The result of these efforts is the new JOOLA Energon Super PBO-c. Due to a new processing technology, an improved connection between the PBO and the firstly used 1K-carbon fibres has been reached. As well as the reduction in weight, the optimised interweaving of both synthetic fibres leads to an enlargement of the sweet spot (even ball ejection almost up to the edge of the racket) and to maximum ball response with as much explosiveness as possible.

thin, very soft Koto face veneer

super PBO-c fibre (connection PBO and 1K carbon) directly under the face veneer

medium-hard, fast Limba veneer

medium-fast, very soft Kiri core veneer from Asia for an excellent ball response

UNLEASH THE POWER

**SUPER
PBO-c**

ENERGON SUPER PBO-c

Result of the most recent technical developments in the manufacturing of blades: JOOLA ENERGON SUPER PBO-c.

Due to an optimised treatment of the deployed synthetic fibres, an even finer texture and a more stable connection was able to be established. The extraordinary light SUPER PBO-Texture (p-phenylene—benzobisoxazole) is closely interwoven with 1K-carbon fibre threads in a criss-cross pattern and lies directly under the thin outer veneer. As a result of this the Sweet spot is enlarged, which enables an even ball ejection almost right up to the edge of the racket face.

In addition to a very high playing feel and a medium-hard impact, this gives the blade an incomparable dynamic and explosiveness, without seeming to be uncontrolled. The JOOLA ENERGON SUPER PBO-c is astonishingly mistake-forgiving, despite highest speed attributes.

The complex design, the use of high-quality materials and the excellent finishing make the JOOLA ENERGON PBO-c an absolute high-class product. Optically and when being played with extraordinary and therefore a must-have for every player.

NOBILIS PBO-c

The new JOOLA NOBILIS: The name says it all!

Only the most precious and high-quality materials are used for this blade. The design and excellent workmanship in every detail speak for themselves.

The structure of the single veneers and layers make the JOOLA NOBILIS special: the PBO-c fibres are directly placed on the Kiri core veneer. The 1.2mm hard Hinoki outer veneers give the blade a prolonged ball contact time in addition to the traditionally good playing feel and allow the most extreme spin ball at high trajectory. This construction gives the blade stability, elasticity and a lot of force, enabling very precise play even at high speed. The interaction of the individual components make the JOOLA NOBILIS PBO an offensive blade that is more than just fast: balanced, good spin, precise with pure feeling. The JOOLA NOBILIS PBO - in its own class!

ZELEBRO PBO-c

The new JOOLA ZELeBRO PBO is an absolutely top class blade, only the best materials are used. This 7-ply offensive miracle develops explosive and direct power without losing control.

The centrepiece of the sensitive JOOLA ZELeBRO PBO-c is the synthetic PBO Poly(p-phenylen-2,6-benzobisoxazol) fibres, plain woven with the carbon bundles, directly positioned under the Limba upper veneer. This causes an enlarged sweet spot, a lot of dynamics and a medium hard stroke at flat trajectory due to the interaction of the ratio of natural woods (Limba, Kiri, Koto) and the PBO carbon fibre fabric. The vibration dampening effect of the PBO-c compound and the even ball bounce are ideal for all players preferring direct offense and precise positioning.

This blade is an asset in every playing situation which is exactly what players expect from a blade!

PBO-c fibres

Go 4 it!

UDC – UNIDIRECTIONAL CARBON CONCEPT

Unidirectional (parallel) to each other placed carbon fibres, that are not interwoven with each other. For highest speed, even ball ejection and higher stability.

- medium-hard, fast and extremely stable Limba face veneer
- vertically placed UD-carbon fibres under the face veneer for highest speed values and highest stiffness
- 2mm thick, extremely soft and very light Balsa layer
- horizontally placed UD-carbon fibres lying on the core veneer
- 1,3mm thick Samba core veneer

UD-carbon fibres in detailed view

new

QUATTRO CARBON

The JOOLA QUATTRO CARBON is the innovative result of two specially coordinated components: Five selected wood veneers harmonise excellently with 4 UD-carbon fibres and generate impressive playing characteristics.

The 4 UD-carbon fibres are unidirectional, which means that they are placed parallel to each other, without being interwoven. This gives the JOOLA QUATTRO CARBON the highest speed attributes and direct playing characteristics, which is ideal for a risk-orientated offensive game at the limit. The horizontal course of the inner and the contrasting vertical course of the outer UD-carbon fibres cause an even, controlled ball ejection and add stability. The core of the fast JOOLA QUATTRO CARBON is the soft Samba veneer. Together with the very light and also soft Balsa layers, which lie on the inner UD-fibres, this gives the blade more feeling when hitting the ball and a lot of control. This hybrid combination out of hard synthetic fibres and soft wood veneers make the QUATTRO CARBON a perfect choice for players, who are looking for highest speed and stability combined with a good measure of control.

ARUNA OFF

ARUNA OFF is the current blade of the JOOLA top star, which he already used at his sensational performance at the World Cup 2014 in Düsseldorf. The only thing that has been modified is the design.

Ideal feedback for a good ball feeling and high controllability are the major features. Despite this, the 7-ply blade still increases rotation at topspin in an ideal way. The ARUNA OFF also has the necessary power for maximum speed due to its modern carbon technology.

P. SOLJA OFF+

This blade, used by the current world ranked no.15 and bronze medal winner at the 2016 Olympic Games with the German women's team, impresses by a perfect combination of speed and playing feel. Since the introduction of the plastic ball, Peti has been looking for a blade that meets her high requirements. A blade that provides a lot of dynamics for her offensive game and also offers maximum feeling and precision in block and counter duels. The balanced playing features of the 7-ply JOOLA P.SOLJA OFF+ are the result of the special veneer combination. High-quality Hinoki outer veneers provide for a sensitive and direct stroke in all playing situations. Carbon fibre directly on the Kiri core veneer provides an enlarged sweet spot and the necessary speed development. The JOOLA P.SOLJA OFF+ is an offensive blade for players of all classes who prefer a blade with a special touch.

P. SOLJA OFF-

This sensational 5-ply full blade is convincing for players of all performance levels. The secret of the P.SOLJA OFF- is the balance of speed, lightness and ball feeling. The slightly thicker Limba outer veneers give the P.SOLJA OFF- a longer dwell time and therefore a high trajectory, which benefits players who spin. The soft pine veneer conveys an equally soft stroke feeling to the player and provides maximum ball control in critical situations. The P.SOLJA OFF- impresses by its extraordinary playing features. It can be used in many ways and is suitable for all playing types from half-distance top-spin players to block and counter play at the table. The P.SOLJA OFF- takes the modern allround game to the next level!

ROSSKOPF ALLROUND

The most popular JOOLA blade, it provides ideal control values due to the special 7-ply construction and conveys excellent ball feeling. With the ROSSKOPF ALLROUND you always have the right answer, in sensitive attacking as well as block and counter play.

	STRATEGY ALLROUND — OFFENSIVE—		SPEED MEDIUM

ROSSKOPF EMOTION

The carbon fibre core of the blade creates an enhanced sweet spot which results in excellent control. In comparison with other blades with carbon core, the ROSSKOPF EMOTION impresses with a relatively soft feel and a high trajectory, due to the specially selected Hinoki surface. The blade offers the best possible balance between feeling in passive and speed in active play.

ROSSKOPF FIRE

The classic among fast offensive blades! Seven specially selected veneers provide high torsion rigidity. The blade impresses with its dynamic and is ideal for a speed orientated attacking game close to the table. JOOLA - top quality at a great price - a blade for the highest demands.

WINNING MADE EASY!

With the AIR-series, JOOLA presents two first class blades in the lowest weight category. Due to a special drying process and a prolonged storage period of the wooden veneers, the moisture in the wood can be extracted to a very high degree. The result is two extremely light blades with excellent playing characteristics. The player needs less power to hold the racket and can then invest this in concentrating on controlled movements when playing a shot.

A special and complex selection process during each production step guarantees that the given weight values are strictly stuck to and can be guaranteed by JOOLA.

AIR CARBON

The JOOLA AIR CARBON is the offensive version of this series. The JOOLA AIR fundamental character is maintained, due to the 5mm thick Balsa core: unique playing feeling and controllability. This version is also an absolute lightweight with a guaranteed 71-72g. The player profits from the saved power and can invest it in his/her game. Due to the two Carbon layers, the JOOLA AIR CARBON gains also in speed and precision for the offensive game!

TPE – JOOLA TOP PLAYER EDITION

JOOLA presents with the TOP-PLAYER-EDITION (TPE) excellent competition blades for ambitious players, who require that something special. All blades have been developed by working together with our top contracted players and coaches. Compromises in the veneer selection or in the production of the TPE blades have not been made. The blades stand out due to their noble and elegant simplicity. Every blade is delivered in the highest quality. On top of this, every blade comes in high-quality packaging.

JOOLA FALCON BLADE SERIES

The design of the three JOOLA Falcon blades convinces with a classical elegant and clearly structured line. All three blades are made using high-quality veneers and are produced to meet the highest quality requirements.

pure

FALCON MEDIUM

Pure control – that is what the 4 Ayous-layers in the FALCON MEDIUM stand for. The mid-veneer which consists of „Tung-Wood“ provides the necessary stiffness for hard topspin balls.

MIKADO OFF+

Speed-dominant, 7-ply Off+ blade for the point-orientated topspin and smash player. The intelligent veneer combination provides excellent feed-back of the blade, thus enabling an easy control of it's aggressiveness.

JOOLA EAGLE BLADE SERIES

On one hand, the JOOLA EAGLE blades convince due to their balanced playing characteristics, which are designed for different playing systems. On the other, the combination of a modern design with a fantastic value for money is an absolute guarantee for success. The blades of the EAGLE series already belong to the classics in the blade segment!

EAGLE MEDIUM

High control, good speed, very low weight and a fabulous price are the secrets of the EAGLE MEDIUM. The blade that allows ambitious table tennis players the fun of playing table tennis has its origin in a well-engineered and proven production technology. Because of the well-balanced speed and control, the EAGLE MEDIUM is also suitable as a beginner blade for children and youth training.

K7

The Carbon-NetT-Material was used for the first time in the JOOLA K7. Carbon-NetT is lighter than other carbon fabrics and still provides the wanted stiffness that is responsible for the speed of the blade. The Enzo layers used at bonding provide high control, which can't be taken for granted on carbon blades. The RAG handle, exclusively developed by JOOLA, additionally increases this control.

K5

The JOOLA K5 does not only fall into the category of first class high-tech blades due to its exclusive design! In practice, vibration control is achieved through the RAG technology and the JOOLA "honey comb", which is almost legendary amongst experts. With these features the K5 has become an established bestseller.

WSI TECHNOLOGY

game features of the extra class

WING MEDIUM

WSI technology (Wing Shaft Integration) provides a totally new feel. The handle is integrated into the blade like a wing thus providing excellent stability. The layers of precious Hinoki are aerodynamically shaped into the handle so that the grip fits perfectly in the hand.

The combination of veneers provides well-balanced playing features and is ideal for players with a lot of spin and a precise blocking game.

Meliorate-Carbon
in detailed view

VIVA

The VIVA is a remodel of the legendary VIVA blade. The 7 layer blade offers excellent balance, which is the basis for the extraordinary spin features. The VIVA is a proven top offensive blade at an unbeatable price.

	STRATEGY OFFENSIVE- — OFFENSIVE extreme
	7 PLY
	SPEED FAST
	TOUCH MEDIUM+
	BLADE SIZE 159x146
	THICKNESS 6,6
	FLARED 101x25
	STRAIGHT 101x23
	ANATOMIC 101x25

COLT – FLEXIBILITY IN THE WRIST

The JOOLA Colt series enables the playing hand to optimally grip the handle and therefore allows even more variation to come into play. What looks slightly strange at first sight is, at the latest when playing with it for the first time, simply innovative and awesome. The specially developed ergonomic handle is easy on the wrist and provides an ideal power transmission from the forearm. Due to more flexibility in the wrist, some gaming situations are easier to master.

	STRATEGY OFFENSIVE- – OFFENSIVE
	5 PLY
	TOUCH MEDIUM-
	THICKNESS 8,1
	FLARED 108x25

COLT OFF SPEED

Lots of power for the active spin player, so that extreme gaming situations can be mastered. That is the hallmark of this modern OFF-blade with a balsa core. Together with the new ergonomic handle, the COLT OFF stands for pure enthusiasm when playing!

	STRATEGY ALLROUND – OFFENSIVE-
	5 PLY
	TOUCH MEDIUM
	THICKNESS 5,9
	FLARED 106x25

COLT OFF CONTROL

Very balanced offensive blade with excellent control in serve and receive situations and when playing passively. At the same time, it offers enough power to dominate the opponent when playing actively.

	MADE IN SWEDEN

BLACK ROSE

The new JOOLA OFF blade BLACK ROSE guarantees „pure ball feeling“, due to the 7-ply combination from selected African veneers and the proven Swedish construction. The extreme balance between maximum control and high speed make this blade a friend of any ambitious player.

	STRATEGY OFFENSIVE- – OFFENSIVE extreme
	7 PLY
	TOUCH MEDIUM+
	THICKNESS 6,2
	FLARED 101x25
	MADE IN SWEDEN

VIKING

Extremely fun to play with, classic Swedish blade that revives the long JOOLA tradition of blades from Sweden. The 7-ply blade in a classic design guarantees fantastic feedback and therefore best possible ball feeling. Quick and well controllable, topclass offensive blade.

defense is the best way to attack

CHEN DEFENDER

For some time, the Chen Weixing Defensive blade has been one of the most popular defensive blades. Working with the world class defensive player from Austria, we have developed another blade designed for extreme defensive players. The CHEN DEFENDER is an oversize blade with considerably more control. The Enzo glue layer between two Samba veneers provides greater control and tremendous feel of the ball.

	STRATEGY DEFENSIVE- — DEFENSIVE extreme	
	7 PLY	SPEED LOW
	TOUCH SOFT-	BLADE SIZE 169x162
	THICKNESS 7,5	STRAIGHT 101x23

CHEN WEIXING

Designed by Europe's best defensive player, it is best suited to a variable and controlled chop defensive game. However, fast topspin shots, as played by Chen Weixing, are also possible without any problem. The layers of black-cloth in the construction provide increased control.

	STRATEGY DEFENSIVE- — ALLROUND	
	7 PLY	SPEED MEDIUM
	TOUCH SOFT	BLADE SIZE 165x159
	THICKNESS 5,9	FLARED 103x25
	STRAIGHT 103x23	

CHEN JUNIOR

Chen Weixing has applied the knowledge gained from training with young Chinese players. It is well-balanced for a child's hand. Ideal relation of speed and control for learning basic strokes.

	STRATEGY DEFENSIVE- — ALLROUND	
	5 PLY	SPEED MEDIUM
	TOUCH SOFT	BLADE SIZE 152x142
	THICKNESS 6,8	FLARED 90x24

TONI HOLD WHITE SPOT

The defensive classic blade! Specially suitable for anti-top rubbers. The cottonwood veneers are extremely soft and very slow providing great control.

	STRATEGY DEFENSIVE- — DEFENSIVE extreme	
	5 PLY	SPEED LOW
	TOUCH EXTRA SOFT	BLADE SIZE 163x155
	THICKNESS 5,7	STRAIGHT 101x24

BLADE FEATURES

JOOLA has made the decision to cease using the old numerical system of blade rating according to values of 0-100 or even more. We believe that our new classification system is easier to understand and that an exact classification into very precise ratings is impossible and highly subjective. The most relevant features of JOOLA blades are illustrated as APPs.

VENEERS

JOOLA blades consist of 5, 7 or 9 veneers.

HANDLE SHAPES

Within our product range we distinguish between three different handle shapes. **Flared, Straight and Anatomic**

HANDLE AND BLADE DIMENSIONS

As there are considerable differences with regard to handle/blade dimensions, we attach the corresponding values to our blade pages. They should give the idea of actual blade dimensions. To simplify, these values are illustrated as Apps. However, there might be minimal deviations due to production.

SPEED

(LOW, MEDIUM, FAST, EXTREME)

Defines speed of the ball when catapulted from the player's racket. The higher the speed of the blade the higher the ball bounce. For beginners we recommend rackets with with less speed.

PLAYING STRATEGIES

In order to choose the most suitable equipment every player should decide into which playing strategy they fall.

DEF -

Classic defensive orientated game away from the table with an occasional attacking shot.

DEF

Modern defensive game, also close to the table, with placed attacking balls.

DEF EXTREME

Modern „material“ game with special rubbers (e.g. Badman), with the aim to disrupt the opponent's attacking game.

ALL

All techniques/shots are played. Controlled shots, variation of spins and placement are more important than speed. One side, usually the backhand side, is focused on blocking or counter shots.

OFF -

Variable topspin techniques, often away from the table, are in focus. The balls are mostly played with a later contact point and have a higher ball flight.

OFF

Game-determining topspin shots from both sides dominate the game. The topspin is not only the set-up, but also the point-winning shot.

OFF EXTREME

Offensive player who plays with a lot of risk. Speed-orientated and power-topspins stand out from other shots. Speed is more important than spin and variation.

TOUCH

The term „Touch“ is used for classification of response (extra soft, soft, medium, hard, extra hard) when the ball hits the blade.

In general:

The harder the touch (e.g. extra hard) the flatter the ball trajectory.

The softer the touch (e.g. extra soft) the higher the ball trajectory.

RUBBER TECHNOLOGIES

CARBON

The classic among the used fibres. Increased the sweet spot, reduced vibration.

RAG

Round-About-Grip – JOOLA exclusive! The veneers are block glued, and afterwards cut across and glued again.

FLOW GLUE

Glue used in aeroplane construction provides an extremely hard, almost vibration free blade.

JUNIOR BLADE

Blades especially designed for a child's hand, with smaller blade and shorter handle.

BURNtec

Almost warp-free blade with moisture removed.

FIBRE

Specially refined VV fibre for highest stability and enlarged sweet spot.

Balsa

Soft power with extra feeling at lowest weight!

meliorate CARBON

Very hard and expensive carbon material. Large sweet spot, unrivalled control.

WSI (Wing-Shaft-Integration Technology)

The JOOLA blade innovation with Wing-Shaft-Integration Technology Wing-shaped handle reinforcement.

Texalium

Aluminium coated fiberglass fabric, large sweet spot, good acceleration.

PBO-c

Extremely tear-proof and elastic high tech fibre for unique playing features. Sensitive touch, outstanding spin dynamics.

SUPER PBO-c

Optimised connection of the "PBO synthetic fibres" and carbon. Leads to maximum ball response, highest possible explosiveness and an enlarged sweet spot.

UDC – CONCEPT (Unidirectional Carbon Concept)

Unidirectional (parallel) to each other arranged carbon fibres, that are not interwoven with each other.

**Plastic ball
- with seam -**

ABS a new way to play

PRIME 40+ ***

new ITTF approved competition ball

The raw material ABS is used for production of the new JOOLA PRIME competition ball with seam. It guarantees identical thickness, even hardness and therefore considerable durability. Performance regarding rotation, ball bounce and flight characteristics, confirmed in various practical tests, proves the absolute top quality of the JOOLA PRIME, setting new standards for table tennis competition balls.

JOOLA PRIME 40+ *** - the prime product in the matter of price-performance ratio!

MAGIC ABS 40+

High quality training ball
JOOLA MAGIC ABS is a plastic ball with seam of the latest generation. Improved production technique and usage of the raw material (ABS) guarantee excellent playing features at very good quality. The stable trajectory as well as the evenly high ball bounce make this training ball essential for youth and club training. The completely identical hardness of the ball is particularly noticeable, having a very positive effect on the durability of the MAGIC ABS and therefore is an excellent choice for clubs with high ball use.

BALLSET COLORATO

Table tennis in a more colourful way! Set of 12 balls with 6 single and 6 two-coloured table tennis balls. In the school playground or when duelling in the garden, you will always be one step ahead with the trendy JOOLA COLORATO balls. The two-coloured ball version also helps you to read the spin in the ball earlier and due to this, improves your performance at the table. Ball set consisting of 12 colourful balls:

6 single-coloured balls: blue, pink, orange, yellow, green
6 two-coloured balls: blue-pink (3), green-orange (3)

TRAINING

Practise ball in blister pack of 12

Blister of 12 white/orange

MULTISIZE SET

8 balls in different sizes from 27-55 mm.

Pack of 8

FAN

Coloured balls bearing players motifs (Chen Weixing, Tanja Krämer).

Pack of 9

SPINBALL

High quality training and leisure ball in the ball design of the future. Ideal training aid also for beginners, due to „visible“ spin.

Pack of 12

BALLBOX

Ball box with lid for the safe storage of 15 table tennis balls.

BALLBOXHOLDER

Ball box holder with lockable plastic container for at least 160 table tennis balls. Solid construction at very low weight. Ideal for modern multi ball training. Set up or dismantled in 2 minutes. A must have for every coach.

BALL COLLECTOR

Handy „Ball-Collector“ with a practical telescopic pole which makes collecting the balls after each training session a lot easier. Foldable upper part, therefore very little storage space required. Collection net opening: 40 cm, Total length: 2 m

DRYtex

„stay dry – play cool“

Light, breathable functional material made from high-quality polyester fibres, that transport moisture away from the body to the outside of the material and hereby encourage the quick evaporation of the sweat. The result is a dryer, cooler and performance-optimised body. The functional fibres are often strained through sport, but are extremely robust and convince with a maximum pleasant wearing comfort.

B-SWIFT

An absolute highlight among table tennis shoes. The modern and yet functional design is specifically tailored to the demands of top performance table tennis. The newly designed sole with incorporated, extremely soft speed absorbing components, perfectly transform even the fastest changes in movement and therefore help to implement the sensed playing situation to footwork.

The JOOLA top players Chen Weixing and Daniel Habesohn (European Champions doubles 2012) use this shoe.

Sizes: 36 - 45
Color: white-red

ATOLL

Specially designed for the requirements of elite table tennis, the high quality made JOOLA ATOLL is the ideal shoe for players with the highest demands. The breathable mesh fabric, as well as the extra soft, ergonomic inner sole provide a comfortable fit. The specifically for table tennis requirements developed MD/ rubber sole convinces with good grip and enables an excellent sense of balance. The JOOLA ATOLL offers the best credentials for that, what good footwork in table tennis distinguishes: a stable stance and quick changes in direction!

Sizes: 36 - 46
Color: white-blue

RALLY

The top shoe from JOOLA for players of the highest standard. The uppers are made from breathable mesh and functional micro fibre which guarantees excellent breathability and comfort. In the sole the proven phylon material is used, making it very light and slip-resistant. The legendary EVA inner sole in combination with the new supination support prevents the foot from deviating outwards. The RALLY has been developed for the ambitious player demanding an extremely lightweight, non-slip and flexible table tennis shoe that also reduces heavy strain on the joints.

Size: 35 - 47
Color: white-blue

COURT

JOOLA COURT meets all requirements of modern table tennis. It is extremely lightweight and the flexible, grippy sole offers best support for all table tennis movements, e.g. a fast lunge or side steps. The soft inner sole supports the foot and the comfortable fit of the JOOLA COURT also provides high wearing comfort. A table tennis shoe for everybody at an attractive price.

Size: 36 - 46
Color: white-blue

TOUCH

The classic among table tennis shoes, Touch has been upgraded with a new appealing design. The sole, manufactured in the same way for many years, provides exceptional grip. The upper material has now been revised and the seams and design have been improved. Therefore, TOUCH is still the model for all leisure and club players.

Size: 36 - 46
Color: white-blue-red

PRO JUNIOR

The new PRO JUNIOR - a shoe specially designed for children, now featuring a new design with practical velcro fastenings! The PRO JUNIOR has a non-slip sole that has been established for years. The EVA mid-sole protects children's joints from too much strain during the growth period. The extremely light shoe enables sudden direction changes and supports the natural movements of table tennis.

Sizes: 30 - 36
Color: white-blue

Tables

JOOLA – the essence of perfect table tennis tables

JOOLA tables with their established surface, “made in Germany”, have not lost in fascination over the years. They are known as the essence of perfect table tennis tables. The unique even ball bounce, the functionality and an ageless, elegant design are loved by players across the globe. The list of events, which have been provided with JOOLA tables for over 60 years is therefore very long. JOOLA also acted as table provider for numerous tournaments in the Seamaster 2018 ITTF World Tour, for example at the 2018 Qatar Open in Doha.

GSC 25

With the new GSC 25, JOOLA continues the production of tables with legendary JOOLA surfaces and a table top strength of 25 mm (as already known on the 5000 table). The 25 mm surface guarantees a 100% even ball bounce on every area of the playing surface – no skidding, quicker and higher ball bounce are a certainty, just as on every JOOLA competition table. The excellent playing feel gives players the confidence and makes this table a reliable partner for many clubs, sports centres and training academies. The top model from the JOOLA product range also convinces due to its unique, striking design. For the first time in the history of the sport of table tennis, an undercarriage has been designed in gold. In combination with the established blue surface, the GSC 25 has an extremely elegant appearance, that is rounded off when using the golden WM Ultra net.

new

GSC 25

- original JOOLA competition table top, 25 mm
- extremely fast playing surface due to special processed polyester coating
- metal frame 60 mm high
- Super-Compact-System – easy to put up or take down due to 2 gas pressured springs on each table-half

the coach's best friend

TT-BUDDY V300

The BUDDY V300 is set up and ready to use in seconds. The ball frequency can be adjusted from 20 to 70. Backspin, topspin and oscillation speed are all adjustable.

- fast setup with no tools or extra equipment necessary
- variable frequencies: from 20 balls/min - 70 balls/min
- variable adjustment of backspin and topspin (each with levels 1 to 5)
- built-in oscillator to play from different table positions
- adjustable oscillation speed and ball frequency
- easy & simple controls
- light weight (approx. 1.1 kg)
- easy storage (Dimensions: 48 x 28 x 28 cm)

TT-BUDDY V200

The TT-BUDDY V200 is a full-value robot in an innovative and modern design. It plays chop, topspin or heavy topspin balls and holds up to 100 balls. Due to its size and easy operation it is the perfect training buddy, suitable for home and leisure use.

- fast setup with no tools or extra equipment necessary
- variable frequencies: from 12 balls/min - 70 balls/min
- 3 different spins: backspin, topspin, heavy topspin
- easy and simple controls
- with remote control
- light weight (approx. 1.1 kg)
- Easy storage (Dimensions: 48 x 28 x 28 cm)

TT-BUDDY V100

The TT-BUDDY V100 is the ideal training partner for beginners. The ball frequency can be easily programmed with the remote control. Emits topspin balls, the ball compartment holds 100 balls. Battery operation (6AA batteries not included).

A/C ADAPTER

Suitable for use with all Buddy robot models.

TT-BUDDY EXPERT

Simple ball robot for hobby players and beginners in a modern design. Balls are mechanically ejected at a constant speed without spin. Battery powered and therefore easy to operate.

Dimensions: 18 x 31 cm
Weight: ca. 0,7 kg

ROBOT SHORTY

The multifunctional table robot JOOLA ROBOT SHORTY is very easy to operate. Variable speed, 8 different rotation modes, different trajectories and oscillation provide a variety of training and application. Collecting net, remote control, large ball container and very easy installation and dismantling make the JOOLA ROBOT SHORTY an indispensable device for all training needs. Including collection net.

NET TT-BUDDY

Economically priced, practical ball collection net for the TT-BUDDY. Easy and fast assembly, fits on the table with nets on the sides. The collected balls fall into a container or bucket (not included) through an opening, making it simple to refill the tt buddy ball container.

STANDARD

Practical plastic construction. Space-saving practical design to protect against damage. With additional pockets for "TIME-OUT" and "HOME/GUEST" display. Numbers 0-30.

POINTER

Robust, durable manufacture, easy to handle, simple to set up and take down with an attractive design. JOOLA SCORER POINTER is ideal for club use, as even when intensively used the plastic parts won't pull out. Includes time out cards.

RESULT

Compact, foldable, very durable plastic scorer with numbers from 0-30 (points) and 0-5 (sets). Cards made of sturdy, non-tear PVC. The solid ring mechanism provides easy flipping.

PICCOLO

Foldable mini plastic score board with PVC numbers 0-20 (points) and 0-5 (sets). Very space-saving and resistant against damage due to its massive construction. The double spiral prevents breaking of the numbers and provides for very easy back and forth flipping. Can be stored in the supplied box.

width=23.7 cm, height=14 cm

SCORER BOARD

New practical score board for club use. The JOOLA TEAM SCORE BOARD can be used upright or suspended. The score board can be individually fixed by means of practical hook-and-loop fasteners and is therefore ideally suited for any club hall.

UMPIRES TABLE WITH INBUILT TOWEL BOXES

With the top new JOOLA umpires table with 2 inbuilt towel boxes you professionally present your court in club sports. The lightweight umpires table can easily be carried by one person and is set up in a few seconds. Unlike conventional tables made of cardboard the solid quality of the umpires table ensures long-term usability.

UMPIRE TABLE

Matching the JOOLA scorer. Elaborate folding construction, no loose parts, with a carrying handle for easy transport. Chosen for many international events and suitable for club use.

L=76 cm, H=69 cm, D=34 cm.

TOWEL BOX

Practical, low-priced and stable towel box. Suitable for multi use.

SURROUND

NEUTRAL:
green/blue 2,00 m
green/blue 2,33 m

JOOLA:
green/blue 2,00 m
green/blue 2,33 m

SURROUND

90 cm high sturdy surround. Very robust and compact. Ideal for daily use in clubs. The height and design of the net means that it will catch most shots so that the flow of play is not disturbed.

blue 2,00 m

SURROUND TRANSPORTER

Robust 40/40 mm steel tube construction. 4 wheels with brakes. All parts zinc coated. The special position of the hanging bars allows for the surrounds to be hung directly on to the transporter. 4 sets of hangers with a maximum of 14 surrounds on each.

Dimensions:
Transporter for 2,00 m surrounds: L 2300 mm / W 720 mm / H 1700 mm
Transporter for 2,33 m surrounds: L 2360 mm / W 720 mm / H 1700 mm

2,00 m

2,33 m

Advertising on surrounds – excerpt from the ITTF regulations:

- Lettering or symbols on the inside of surrounds shall not include white or orange nor more than two colours and shall be contained within a height of 40 cm;
- it is recommended that they be in a slightly darker or slightly lighter shade of the background color

highest level of outdoor performance

OUTDOOR TR

- 22 mm improved sandwich aluminium plate

new

RACKET COLORATO

High-quality, very controlled table tennis racket, stands out because of the attractive colour design. The different colours of the Colorato rubbers on the front and back make the racket Colorato an absolute eye-catcher. The five-layered blade has a flared handle and has been mounted with 2,0 mm strong Colorato rubbers.

Choose your favourite racket version (blue-pink or green-orange) and bring your opponent to the point of despair with offensive shots rich in variation.

Variants:

Racket 1: rubber colour blue-pink
Racket 2: rubber colour green-orange

new

SET RACCHETTA COLORATO

The cool set consists out of 2 high-quality Colorato rackets with different coloured rubbers on the front and back, as well as 8 two-coloured Colorato balls. The trendy racket with a flared handle offers excellent playing characteristics and guarantees a lot of fun at the table. The two-coloured balls fit together with the colours of the rackets and improve visibility of the spin in each shot.

All items are part of the stylish JOOLA Colorato series consisting of colourful table tennis rackets and colourful table tennis balls.

Racket 1: front blue, back pink
Racket 2: front green, back orange
Balls: 4x blue-orange, 4x green-orange

OUTDOOR BALL

40mm table tennis ball for outdoor use. 41% heavier, therefore optimal features to play outside; also when it's windy.

Carton of 6

ALLWEATHER

JOOLA ALLWEATHER – ideal bat for leisure table tennis. Weatherproof, extremely robust, anatomically formed and non-slip handle, easy to play with due to special rubber structure.

ALLWEATHER Bat: red, yellow

ALLWEATHER Set: 2 rackets in practical storage box

LINUS

A plastic racket made to fit the requirements of an outdoor racket. With a high level of control, the special surface structure also allows spin development, so that slightly spinny topspin and push balls are possible. Racket is robust and ergonomically formed.

LINUS Bat: red, blue

LINUS Set: 2 bats

TT-SET MULTICOLOR

Four weatherproof rackets, easy playable and in four different colours. Ideal for children's birthday parties, visits to the swimming baths and barbecues. A highlight at every party.
